

Biosecurity plan for Mooring Application 00010409 in Loch Creran.

1. The boat will be treated with the correct antifoul every year.
2. The boat will be removed from the water over the winter and the boat thoroughly cleaned.
3. The boat will be used regularly to reduce the risk of any build up of fouling.
4. When the boat is out of the water to be cleaned it will be ensured that it is cleaned well above extreme high water line and none of the scrubbed off material returns to the water.
5. The mooring will be dropped to the seabed in the winter to smother ant fouling which may have built up throughout the season.
6. Make sure anyone who may have cause to use the boat and mooring understands all of the above.
7. Should anything unusual or suspicious be identified we will take pictures and notify the relevant authorities.
