# Marine Renewable Energy Projects in the Territorial Sea and UK Controlled Waters Adjacent to Scotland

### Marine (Scotland) Act 2010

IMPORTANT: Before completing this form, please read these notes carefully.

The following numbered paragraphs correspond to the questions on the application form and are intended to assist applicants in completing the form. These explanatory notes are specific to this application and so applicants are advised to read these in conjunction with the General Guidance document. If further clarification is needed please contact Marine Scotland Licensing Operations Team (MS-LOT) on 01224 295579 or email:

MS.MarineLicensing@scotland.gsi.gov.uk

Please refer to the General Guidance for information regarding payment methods.

### **Explanatory Notes**

### 2. Applicant

The person, company or organisation making the application that will be named as the licensee on any licence issued.

### 3. Agent

Any person, company or organisation acting under contract (or other agreement) on behalf of any party listed in the answer to question 2, and having responsibility for the control, management or physical deposit of materials anywhere below the tidal limit of the mean high water springs (MHWS) (e.g. a consultancy company submitting the application or a contractor who will be carrying out the works.)

### 4. Duration of Project

Provide details of the proposed commencement and completion dates of the project. The start date will not normally be backdated, except in exceptional circumstances, since to commence a project for which a licence has not been obtained may constitute an offence resulting in appropriate legal action. A licence is normally valid for 1 calendar year or the duration of the project (whichever is longer). After this period, it may be necessary for licence holders to re-apply for a further licence to continue any ongoing work (i.e. the project will be reviewed to establish whether original details are being adhered to). Although Marine Scotland Licensing Operations Team (MS-LOT) will aim to write to licence holders one month before the expiry date of a licence, it is the licensee's responsibility to apply for any further licences or an extension prior to the expiry of the initial licence.

### 5. Description and Cost of the Proposed Project

- (a) This estimate should only cover work taking place below the tidal level of MHWS and should take into consideration the cost of materials, labour fees etc.
- (b) Where the project is expected to take longer than 12 consecutive months, this description must detail which elements are to be undertaken in the first 12 months, with an outline of the schedule for each further 12 month period (the method of work should be described in the answer to question 7). In the event that MS-LOT must undertake a wider consultation on your application this description may be used as a basis for informing other bodies as to the nature of the proposed work.
- **(c)** Best describe the type of work proposed. Where the project involves a number of elements, please complete all appropriate boxes.

### 6. Location of Project

Include a list of the National Grid References (NGR) or latitude and longitude co-ordinates of the boundary points of the proposed project. In some cases, (e.g. the laying of cables) it may only be practicable to supply NGR or latitude and longitude co-ordinates for the start and end points.

**NGR:** Should consist of two letters followed by 10 digits (e.g. TL6320031700) where the first 5 digits are the eastings (read from the south west corner of an Ordnance Survey map) and the last 5 digits are northings.

**Latitude & longitude:** For positions read from charts of 1:25,000 scale or smaller, the format should be, e.g. 5555.55'N 222.22'W. The decimal point specifies that decimals of minutes are used and the datum is stated explicitly. If seconds are used then the datum should be explicitly marked, e.g. 55°55'44"N 2°22'11"W. For positions read from larger scale charts, e.g. 1:10,000, three decimal places of minutes should be used, e.g. 55°55.444'N 2°22.222'W.

It is important that the correct positions are included with this application, as any errors may result in the application being refused or delayed.

To supplement the information given in section 6, the following must be provided with the completed application form:

- a suitably scaled extract of an Ordnance Survey Map (1:2,500 scale but not more than 1:10,000) or Admiralty Chart which should be marked to indicate:
  - the full extent of the project in relation to the surrounding area;
  - o either NGR or latitude and longitude co-ordinates defining the area of operation.
  - o the level of MHWS:
  - o any adjacent Special Area of Conservation (SAC), Special Protection Area (SPA), Site of Special Scientific Interest (SSSI), Ramsar or similar conservation area boundary.

These drawings/plans may be copied to others as part of the MS-LOT consultation process. If they are subject to copyright, it is the responsibility of the applicant to obtain necessary approvals to reproduce the documents and to submit suitably annotated copies with the application.

### 7. Method Statement

Please provide a full method statement, including details of any temporary structures/deposits that may be required below MHWS during the project, the ultimate fate of the structure and material used in its construction. Details of temporary structures will be included in any licence issued.

Proposed measures to ensure the marine environment is adequately safeguarded during the project should also be described, as should those taken to minimise any interference with other uses of the sea or foreshore.

### 8. Permanent (and Temporary) Deposits

- (a) Complete the appropriate box(es) to indicate all materials to be deposited below MHWS. If you propose using types of materials for which a specific box is not provided, please describe the nature of such material in the box marked "Other".
- (b) If any materials to be placed below MHWS are to be brought to the site by sea, give details of the material (e.g. clean rock, average particle size) the vessels to be used,

A chart should also be provided showing the proposed vessel route to the project site and details of any transshipment areas (i.e. where material may be off-loaded to smaller vessels/barges for transport inshore).

If temporary deposits are required, please provide details as with the permanent deposits above. The temporary deposit location details (NGR or Lat/Long) should be added to section 6 of the form, and the period of time the site will be used must be provided. If issuing a licence, MS-LOT will include on the document details of any area that has been approved as a temporary deposit site

### 9. Producer/Contractor

The person, company or organisation whose activities produce the material intended for deposit in the sea (e.g. the dredging or excavation contractor).

### 10. Holder

The person, company or organisation that will be in possession of the waste prior to its deposit in the sea. This will include those providing temporary storage facilities or transporting the material to the vessel for conveyance to the sea disposal site etc.

### 11. Agent

Any person, company or organisation acting under contract (or other agreement) on behalf of any party listed in the answer to sections 1, 9 or 10 and having responsibility for the control, management or deposit anywhere below the tidal limit of MHWS (e.g. a consultancy company submitting the application or a contractor who will be carrying out the operations).

### 12. Duration of Dredging/Drilling Operation

Provide details of the proposed commencement and completion dates of the operations. The start date will not normally be backdated, except in exceptional circumstances, since to commence a project for which a licence has not been obtained may constitute an offence resulting in appropriate legal action. A licence may be issued for up to 3 calendar years, although MS-LOT will aim to write to licence holders two months before the expiry date of a licence, it is the licensee's responsibility to apply for any further licences or an extension prior to the expiry of the initial licence.

### 13. Details of Dredging/Drilling and Disposal Vessel(s)

The name, operator and type of vessel, including the type of dredging/drilling plant (e.g. cutter-suction) should be entered. If vessel details are not available at the time of application, please indicate this on the form as these details will be required prior to licence issue.

### 14. Method Statement of Dredging/Drilling Operation

Provide a full method statement of the dredging/drilling operation. This should include details such as the rate of dredging/drilling, timing of the operation, order of the areas to be dredged/drilled and the precautions taken to protect both navigation and the environment.

### 15. Use of Explosives

Indicate whether explosives are to be used as part of the dredging operations. If yes, please indicate if a method statement has been provided with your application. If a method statement has been produced but is not available, please provide an explanation in the space provided.

### 16. Details of Areas to be Dredged/Drilled

This section requires data to be provided about the source area to be dredged and the type of material to be deposited.

Name of Area - An annotated chart/location plan (either at A3 or A4 format) of suitable scale (1:2,500 but no more than 1:10,000) should be provided, with each proposed dredge area marked and named. The chart/location plan should show the full extent of the project in relation to the surrounding area. These drawings/plans may be copied to others as part of MS-LOT consultation procedures. If they are subject to copyright, it is the responsibility of the applicant to obtain necessary approvals to reproduce the documents and to submit suitably annotated copies with the application.

**Co-ordinates -** Include a list of the National Grid References (NGR) or latitude and longitude co-ordinates of the boundary points for the proposed dredge areas.

- **NGR:** Should consist of two letters followed by 10 digits (e.g. TL6320031700) where the first 5 digits are the eastings (read from the south west corner of an Ordnance Survey map) and the last 5 digits are northings.
- Latitude & longitude: For positions read from charts of 1:25,000 scale or smaller, the format should be, e.g. 5555.55'N 2:22.22'W. The decimal point specifies that decimals of minutes are used and the datum is stated explicitly. If seconds are used then the datum should be explicitly marked, e.g. 55°55'44"N 2°22'11"W. For positions read from larger scale charts, e.g. 1:10,000, three decimal

places of minutes should be used, e.g. 55°55.444'N 2°22.222'W.

Nature of Dredge/Drill Area - provide a description of the type of area to be dredged/drilled (e.g. river bed, sea, harbour, approach channel, estuary)

### 17. Details of Material to be Dredged/Drilled

Information is required for each of the areas listed in the answer to section 16. The applicant should indicate the following:

A pre-dredge survey and sediment chemical analysis report will be required by MS-LOT prior to the issue of a sea disposal licence. Please contact MS-LOT for details in relation to specific projects. In addition to those samples analysed by the applicant, sediment sub-samples must be submitted to MS-LOT as check monitoring may be required.

Physical Composition of Material - indicate the approximate proportions (by volume) of the different types of dredged materials which are expected to be removed from each area.

For the purposes of this application the following descriptions should be used:

| Average particle size (Based on the Wentworth Table) |            |             |  |
|--|------------|-------------|--|
| Description Lower range                              |            | Upper range |  |
| Boulders   | 256 mm+    |             |  |
| Cobbles  | 64 mm      | 256 mm      |  |
| Pebbles  | 4mm        | 64 mm       |  |
| Granules   | 2 mm       | 4mm         |  |
| Sand   | 62 microns | 2mm         |  |
| Silt and clay  |            | 62 microns  |  |

Depth of Material to be Removed - indicate the maximum depth (in metres) below the current seabed level, to which it is expected dredging is to be carried out.

Estimated Specific Gravity - indicate the specific gravity of the material to be disposed.

Quantity to be Dredged/Drilled per Year - the amount of material to be dredged (per year) from each area. Indicate unit of measure, either in-situ cubic metres or metric tonnes.

### 18. Dredged/Drilled Material: Additional Information

Contamination - information should be given regarding contamination in any of the areas to be dredged/drilled e.g. waste discharges, man-made rubbish or industrial activity in close proximity.

Type of dredger - indicate the type of dredging plant to be used within each area.

Beneficial uses – include any intended beneficial use of material (details to be provided in the BPEO).

### 19. Details of Dredged/Drilled Material Quality

The applicant is required to have representative sediment samples analysed at a laboratory of choice. This is liable to extend the time required to consider your application as no licence will be issued without provision of this chemistry data. As part of the application consideration process, an assessment will be made of the

chemical and physical characteristics of the material to be deposited at sea and its potential effects upon the marine environment.

As part of the licence conditions, you may be required to take representative samples of the dredged/drilled material during the dredging/sea disposal operations for analysis by MS-LOT. In such cases, samples should be taken at specified locations and depths and placed in containers which will be provided. The samples should then be returned to MS-LOT at the Marine Laboratory Aberdeen. This process enables the UK to fulfil its obligations under international conventions.

### 20. Best Practicable Environmental Option (BPEO) Assessment

Under Part 4, Section 27(2) of the Marine (Scotland) Act 2010 (there is no equivalent provision under the Marine and Coastal Access Act 2009), the Licensing Authority has an obligation to consider the availability of practical alternatives when considering applications involving disposal of material at sea. In order for Marine Scotland to thoroughly assess the available alternative options and reach a properly considered decision, all sea disposal licence applications must be supported by a detailed assessment of the alternative options - a Best Practicable Environmental Option (BPEO) assessment. This should include a statement setting out the reasons which have led to the conclusion that deposit of the materials at sea is the BPEO. **Sea disposal applications will not be considered unless they are accompanied by a BPEO assessment.** All options in the BPEO should be explored fully (as per the guidance documents) otherwise your form and BPEO are liable to be returned to you thereby delaying processing of the application.

### 21. Sea Disposal Site Details

Provide details of the proposed sea disposal site for the dredged material and, if necessary, any alternative sea disposal site(s) considered. In determining whether to issue a licence, MS-LOT will take into account any site nominated by the applicant. However, should this site be unsuitable, the nearest suitable disposal site for the dredged material will be identified. Should you wish to establish a new site, please provide details in a covering letter with your application and MS-LOT will contact you to discuss your proposal before your application is determined. The cost of any site investigations to identify any new sea disposal site will normally be the responsibility of the applicant.

### 22. Other Consents

Detail all consents required for the proposed project and indicate those that you have applied for or received. In all cases the applicant must provide the name and address of the nearest Local Planning Authority for the location of the project.

### 23. Statutory Consenting Powers

Please describe in the answer to this question what (if any) statutory responsibilities you (or your client) have to consent any aspect of the project.

### 24. Advertising and Consultation

- (a) Confirm whether the proposed project has been advertised, and if so how and where?
- (b) Have the public been invited to comment on the proposed project? If so to whom and what was the closing date?
- (c) Have any consultation meetings been held with the public? If so where and when?

### 25. Consultation with Conservation Bodies

Consenting Authorities have a duty to ensure marine projects will not have a significant adverse environmental impact, particularly upon designated conservation areas (e.g. SSSI, SAC, SPA, Ramsar sites etc). All details of

consultations with conservation bodies (e.g. SNH, JNCC) should be given, particularly where the applicant has statutory powers for consenting aspects of the project

In addition, guidance can be obtained from <a href="www.foodstandards.gov.uk/">www.foodstandards.gov.uk/</a> with regards to the Shellfish Waters Directive (2006/113/EC) which has parameters set to protect the water quality in which edible shellfish are grown.

### 26. Designated Conservation Areas

Indicate whether the proposed project is located within or close to the boundaries of a conservation area such as a SAC, SPA, SSSI or Ramsar site (further information can be found on the SNH SiteLink webpage <a href="http://gateway.snh.gov.uk">http://gateway.snh.gov.uk</a>).

### 27. Environmental Assessment

Under the Marine Works (EIA) Regulations 2007, there may be a requirement for certain projects to undergo an Environmental |Impact Assessment (EIA) and produce an Environmental Statement (ES). If an EIA/ES is deemed necessary, MS-LOT cannot issue a marine Licence until the outcome of the EIA/ES has been determined. Please indicate whether any EIA has been carried out in respect of the proposed project, either under your own powers or as required by another authority. If such an assessment has been undertaken, please indicate if a copy has been provided with your application. If the statement/assessment has been completed but is not available, please provide an explanation in the space provided.

Additionally, please also give details regarding if and where a copy has been/is being made available for public inspection.

### Other Considerations

Applicants should also be aware of the need to pay due regard to coastal and marine archaeological matters and attention is drawn to Historic Scotland's Operational Policy Paper HP6, "Conserving the Underwater Heritage". Please ensure that you have:

- completed all applicable sections of the application form;
- signed and dated the declaration;
- provided the correct relevant documents, charts, and continuation sheets (where necessary); and
- enclosed the correct payment (together with the remittance slip) or paid by means of BACS (if appropriate).

Otherwise your application may be delayed or returned to you.

**Public Register** 

# Application for Marine Renewable Energy Projects in the Territorial Sea and UK Controlled Waters Adjacent to Scotland

(ML-003)

### Marine (Scotland) Act 2010

It is the responsibility of the applicant to obtain any other consents or authorisations that may be required.

Under Part 4, Section 54 of the Marine (Scotland) Act 2010 and Section 101 of the Marine and Coastal Access Act 2009 all information contained within or provided in support of this application will be placed on the Public Register. There is no national security grounds for application information not going on the Register under the 2010 Act. Under the 2009 Act, application information goes on the Register unless the Secretary of State determines that it's disclosure in the Register would be contrary to the interests of national security.

# Is there any information contained within or provided in support of this application that you consider should not be included on the Public Register on the grounds that its disclosure (a) would be contrary to the interests of national security; or YES NO (b) would adversely affect the confidentiality of commercial or industrial information where such confidentiality is provided by law to protect a legitimate commercial interest? YES NO If YES, to either (a) or (b), please provide full justification as to why all or part of the information you have provided should be withheld. The value of the proposed works is considered to be commercially confidential.

### **Application Check List**

### 1. Electronic Application

- Completed application form x 1
- Project drawings x 1
- Method Statement x 1
- Maps/Charts x 1
- Additional environmental information, eg. Photographs, Environmental Impact Assessment etc (if required) x 1
- Payment (signed cheque or BACS details)

## ✓

### 2. Non-electronic Application

- Completed, signed application form x 7
- Project drawings x 7
- Method Statement x 7
- Maps/Charts x 7
- Additional information, eg. photographs, Environmental Impact Assessment etc (if required) x 7 (dependent on size and relevance to consultees)
- Payment (signed cheque or BACS details)

### **Green Volt Offshore Windfarm Marine Licence Application Supporting Information**

### Response to Question 5 (b) Give a detailed description of the proposed schedule of work.

The Applicant aims to begin offshore construction in Quarter 1 (Q1) of 2025. Completion of offshore construction and start of operation are expected in Q4 of 2027. Project construction will be completed in a number of stages as follows:

- Pre-construction surveys and seabed preparation activities;
- WTG assemble and pre-commissioning;
- WTG integration;
- Mooring installation;
- Export cable installation;
- Substructure integrated with WTG tow-out;
- Mooring hook up;
- Array cable installation;
- Offshore Substation Platform (OSP) jacket installation and piling;
- Array cable connection;
- OSP topside installation; and
- Final WTG commissioning.

The detailed schedule of offshore construction activities is provided in Table 1 and the full schedule of offshore construction activities is detailed in Chapter 5 Project Description of the EIA Report. The offshore export cables installation from landfall to 12 nm will take place in Q1 to Q2 2027.

Table 1 Project programme for offshore construction

### Response to Question 5 (c) Types of Work Proposed

**Moorings:** Project vessels will utilise dynamic positioning to hold station; anchors will only be dropped in an emergency.

**Dredging/Drilling operations:** There will be seabed preparation activities to remove any obstacles and level the seabed in areas of sand waves.

### Response to Question 7) Method Statement.

The Green Volt Offshore Windfarm will comprise up to 35 offshore WTGs and associated floating substructures, one fixed offshore substation platform (OSP), inter-array cables and export cables with scour and cable protection as required.

This application relates to the offshore export cables from landfall to 12 nm (including the scour and cable protection).

The Commitments Register in Appendix 21.1 of the EIA Report details the Applicant's proposed measures to ensure the marine environment is adequately safeguarded during the Project activities and to reduce or eliminate impacts on other sea users.

### Response to Question 8 (a) Permanent (and Temporary) Deposits.

The quantity of permanent (and temporary) materials to be deposited below MHWS is detailed in Table below.

| Type of Deposit          | Nature of Deposit (P –<br>Permanent, T= Temporary) | Deposit Quantity                |
|--------------------------|--|---------------------------------|
| Steel/Iron               | N/A  | N/A                             |
| Timber                   | N/A  | N/A                             |
| Plastic /Synthetic       | N/A  | N/A                             |
| Concrete                 | N/A  | N/A                             |
| Silt                     | N/A  | N/A                             |
| Sand                     | N/A  | N/A                             |
| Stone/Rock/Gravel        | Р  | 68,400 m <sup>3</sup>           |
| Concrete bags/mattresses | Р  | 90 mattresses                   |
| _                        |  | Total volume 486 m <sup>3</sup> |
|                          |  | Mattress dimensions: 6.0 m x    |
|                          |  | 3.0 m x 0.3 m                   |
| Cable                    | Р  | 65,952 m total length           |
| Other                    | N/A  | N/A                             |

### Response to Question 16) Details or Areas to be Dredged/Drilled

| Dredge/Drill Areas | Name of Area to be<br>Dredged/Drilled                | Co-ordinates  | Nature of<br>Dredged/Drilled Area     |
|--------------------|--|---|---------------------------------------|
| A                  | HDD at cables landfall (2 bores, one for each cable) | Within the Offshore<br>Export Cable Corridor.<br>Two landfall options (St<br>Fergus and North<br>Connect) | Please see Chapter 5 of<br>EIA Report |

### Response to Question 17) Details of Material to be Dredged/Drilled

| Dredge/Drill<br>Areas | Estimated<br>Specific<br>Gravity | Physical<br>Composition of<br>Material   | Depth of Material to be Removed (metres)   | Quantity to be Dredged/Drilled per Year (either in situ m³ or metric tonnes)   |
|-----------------------|----------------------------------|--|--|--|
| Α                     | Unknown                          | St Fergus option:<br>sand, with varying<br>proportions of gravel<br>and low proportions of<br>silt/clay. | Still to be determined. Full details will be available in the Green Volt Offshore Windfarm Onshore EIA Report. | Still to be determined. Full<br>details will be available in<br>the Green Volt Offshore<br>Windfarm Onshore EIA<br>Report. |
|                       |                                  | North Connect option: gravelly sand and silty fine sand  |  |  |

### Response to Question 24 (a) Have these proposals been advertised to the public?

The Applicant held an online PAC exhibition on the 20th September 2022 for the activities undertaken with respect to components of the Landfall Export Cable Corridor located between MHWS and 12 nm offshore. A dedicated page on the Green Volt Offshore Windfarm website was developed, hosting an interactive virtual exhibition with ten display boards providing detail on the Project, the marine planning and policy strategy, the offshore infrastructure and works, the marine consents, licences and EIA process, the surveys, studies and assessments undertaken to understand the human, physical and biological environment, the engagement process and the Project timeline. In addition to the live events, the online exhibition which formed part of the live question and answer session has been available on the Green Volt Offshore Windfarm website (https://greenvolt- exhibition.com/exhibition/) since the 1st August 2022 and will be available indefinitely in pdf-format.

Following acceptance of this application by MS-LOT, public notices will be placed in the following publications: the Scotsman, the Buchanie, the Press and Journal, the Edinburgh Gazette, Lloyd's List and the Fishing News Bulletin and any other newspaper deemed relevant and on dates agreed with MS-LOT.

### Response to Question 24 (b) Have the public been invited to submit comments?

During the PAC event that took place on 20th September 2022, two live question and answer sessions were held between 1 and 2pm, and 6 and 7 pm. Stakeholders were invited to ask live questions via chatbox, and questions were answered live by the Applicant and Project team. It should be noted that, despite the PAC process formally applying to the works within 12 nm, stakeholders were also invited to comment on all offshore aspects of the project during the PAC process. In addition, any comments raised on the onshore works have been shared with the onshore Project team. The Offshore PAC Report (Appendix 6.2) details a full overview of the PAC activities undertaken by the Applicant, including a list of consultees and information/feedback received from stakeholders during the process.

The public advert for the application will be published for two successive weeks and will advise the public they have 42 days from the date agreed with MS-LOT following acceptance of the application to submit comments on the proposed Project.

Response to Question 25: Provide details of any consultation with Conservations Bodies, and, if appropriate, include copies of any correspondence with your application.

Conservation bodies were consulted following the submission of an Offshore Scoping Report (Appendix 1.2 of the EIA) to MS-LOT on 15 November 2021. The EIA for the Project has been informed by the outcomes of formal scoping exercises, ongoing consultation with statutory bodies and other stakeholders and consultation with local communities. A list of all statutory and non-statutory stakeholders consulted during scoping and preparation of the Offshore EIA Report is provided in the Offshore PAC Report (Appendix 6.2 of the EIA Report).
