MD-00011742 & MD-00011743 - Spiorad na Mara Limited - Spiorad na Mara Offshore Wind Farm - Isle of Lewis

I formally object to the above application as it contravenes the following planning policies and guidance:

Lack of Community Engagement: There was no consultation with the communities of west Lewis before Crown Estate Scotland identified and leased the N4 area for development. The plan was imposed on them without consent.

Scotland's National Marine Plan (NMP) GEN 18 *'Early and effective engagement should be undertaken with the general public and all interested stakeholders to facilitate planning and consenting processes.'*

NMP Para. 4.77 *'Engagement with the public and other stakeholders should be appropriate, proportionate and meaningful. It should be undertaken as early as possible in planning and consenting processes.'*

NPF4 Spatial Principles - Just Transition. *'We will empower people to shape their places.'*

Lack of understanding of Cultural Significance: The EIAR makes no reference to the personal, cultural or historical attachment of the population of Lewis to their landscape and heritage, and fails to assess impacts on the living intangible heritage of the Gaelic community. Until a full assessment addressing impacts on Gaelic language and culture, community wellbeing, and west Lewis communities' relationship with their coastline is completed and publicly consulted upon, this application cannot lawfully be determined.

NMP Para. 4.20 *'The historic environment includes all aspects of the environment resulting from the interaction between people and places through time.'*

NPF4 Policy 7 a *'Development proposals with a potentially significant impact on historic assets or places will be accompanied by an assessment which is based on an understanding of the cultural significance of the historic asset and/or place.'*

Significant Adverse Impacts on Protected Birdlife and Habitats: The development occupies primary foraging grounds for the Lewis Peatlands SPA red-throated divers, falls within the foraging range of the St Kilda gannet colony, and crosses a principal UK migratory corridor for protected species, including whooper swan and pink-footed goose. The EIAR fails to adequately assess the threats of collision, displacement, and barrier effects to these declining populations. Thus, consent would breach the **Conservation (Natural Habitats &c.) Regulations 1994**, the **2018 Offshore Regulations**, the **Marine (Scotland) Act 2010**, and the **Wildlife and Countryside Act 1981**, as the proposal is likely to adversely affect the integrity of the following SPA's: Lewis Peatlands, West Coast of the Outer Hebrides, Seas off St Kilda and St Kilda.

NPF4 Policy 7 i *'Development proposals affecting a World Heritage Site or its setting will only be supported where their Outstanding Universal Value is protected and preserved.'*

NPF4 Policy 11 e ix Impact on *'biodiversity including impacts on birds'* must be addressed.

Failure to Protect the Integrity and Setting of Scheduled Monuments: The EIAR anticipates significant adverse effects on coastal heritage. It fails to assess the impact on key scheduled monuments such as SM13786. The proposal would harm the Calanais monuments and wider historic landscape by introducing an industrial horizon into their natural surroundings, fundamentally undermining the meaning, experience, and interconnected setting of these sites, directly conflicting with **NPF4 Policy 7**. There are many alternative sites for offshore wind development and no reasons of over-riding public interest for choosing this site.

NMP Para. 4.22 *'Marine planning should help to ensure that future marine activities and developments can be carried out in a way that respects the marine historic environment and the setting of important coastal heritage assets.'*

Para. 4.23 *'Designated assets should be protected in situ within an appropriate setting.'*

NPF4 Policy 7 h *'Development proposals affecting scheduled monuments will only be supported where:'* ii *'significant adverse impacts on the integrity of the setting of a scheduled monument are avoided; or* iii *exceptional circumstances*

have been demonstrated to justify the impact on a scheduled monument and its setting and impacts on the monument or its setting have been minimised.'

Unassessed Onshore Impacts and Breach of Statutory Rights of Crofters: Granting offshore consent while onshore impacts on irreplaceable machair and deep peatland remain unassessed, directly contravenes **NPF4 Policy 3**, which requires biodiversity (including irreplaceable habitats) to be left in a demonstrably better state. In addition the proposal fails to engage the statutory rights of crofters under the **Crofters (Scotland) Act 1993**.

NMP Para. 4.77 *'There should be a presumption in favour of publicising applications for marine and terrestrial components of a development together during consenting processes.'*

Irreparable Harm to the Tourism Economy and Coastal Character: The Spiorad na Mara wind farm would permanently industrialise the unspoiled coastal scenery and dark skies on the Isle of Lewis, destroying the very qualities that attract visitors to the island. Local residents have consistently warned during consultation that this visual impact would decimate the tourist industry on which so many islanders depend. Tourism is built on the area's landscape, seascape, heritage, nature, and dark skies. This development risks long-term damage to local businesses and the wider economy, contrary to **NPF4 Policy 30**.

NMP, Para. 12.28 *'An unspoiled environment, high quality landscape and a sense of closeness to nature are important to many people. Scenery and environmental quality are key factors in attracting visitors to Scotland's coasts,'*

Community Opposition and lack of Community Empowerment: The Community Opinion Survey on the Spiorad na Mara Offshore Wind Farm Development (N4) published by www.emg-lewis.co.uk in April 2026 found that 88% of residents from Ness to Uig opposed the N4 development. Approving this project against such overwhelming local consensus would directly contravene the National Islands Plan's commitment to community empowerment.

The National Islands Plan, page 65, para. 5 *'Our vision is for islanders to be empowered to shape their own priorities, build their futures, and protect what makes their communities unique.'*

My further objection points:

I have no objection to renewable power per se but the scale and location of this project is wrong. We are a small population on the edge so there is a view that we don't matter, that we will roll over and that we will fall for the promise of a few pounds to 'compensate'.

We are a proud people with a long heritage and a unique culture who have lived here for generations, who were self-sufficient for many of those generations and for a multinational company to think that they can come here and carry out economic rape of our landscape is totally abhorrent.

We are not people who come and go, move house to make money - we have lived here for the vast majority of our lives and we are deeply rooted to the land and inextricably tied to the sea.

We are fragile enough as it is regarding population and infrastructure, without this massive construction and eyesore further contributing to our decline. The west side of this island is a precious jewel with its beautiful vistas and home to so much wildlife and sea life and we want to keep it that way. Our ancestors and future generations would never forgive us for letting this monstrosity go ahead.

This planning decision is about the long-term future and the character of a landscape and community that cannot be replaced once altered at this scale. Spiorad na Mara Offshore Wind Farm would cause significant, cumulative and largely irreversible harm to landscape and seascape character, heritage setting, and the tourism economy.
I respectfully request that this application is rejected.

Yours sincerely,

Subject: SPOIRAD NA MARA
Date: 04 May 2026 10:10:55

4th May 2026

Dear Sir/Madam,

I am writing to formally object to the proposed Spoirad Na Mara development.

While I recognise the importance of investment and development within rural and island communities, I have significant concerns regarding the potential impacts of this proposal, particularly in relation to its scale, location, and long-term effects on the local area.

Firstly, the development appears disproportionate to the character and infrastructure of the surrounding area. Projects of this nature risk altering the landscape in a way that is not in keeping with the existing environment, which is valued both by residents and visitors. The visual impact—particularly the scale and density of turbines proposed—would significantly change the character of the area and create an industrialised landscape that is out of place.

Secondly, there are concerns around infrastructure capacity. Developments of this scale inevitably place additional pressure on local services such as roads, utilities, and community resources. It is not clear that adequate provisions have been made to ensure these systems can cope without negatively affecting existing residents.

There are also concerns about the impact on those living nearby, particularly in relation to noise and light disturbance arising from both the construction phase and ongoing operation of the wind farm. These effects have the potential to significantly affect residential amenity and quality of life over the long term.

Environmental impact is another key issue. The area in question supports wildlife habitats and ecosystems that could be disrupted during both construction and operation. Once disturbed, these environments can be difficult—if not impossible—to fully restore.

Additionally, there is the question of long-term community benefit. It is important that developments provide clear, sustainable advantages to local residents rather than short-term or external gains. At present, it is not evident that the benefits outweigh the potential drawbacks.

For these reasons, I believe the proposal requires further scrutiny and reconsideration. I would urge the decision-makers to take into account the cumulative impacts and to prioritise developments that are more in line with the needs and character of the local community.

Thank you for taking the time to consider my concerns.

Yours faithfully,

MD-00011742 & MD-00011743 - Spiorad na Mara Limited - Spiorad na Mara Offshore Wind Farm - Isle of Lewis

I formally object to the above application as it contravenes the following planning policies and guidance:

Lack of Community Engagement: There was no consultation with the communities of west Lewis before Crown Estate Scotland identified and leased the N4 area for development. The plan was imposed on them without consent. **Scotland's National Marine Plan (NMP) GEN 18** 'Early and effective engagement should be undertaken with the general public and all interested stakeholders to facilitate planning and consenting processes.'
NMP Para. 4.77 'Engagement with the public and other stakeholders should be appropriate, proportionate and meaningful. It should be undertaken as early as possible in planning and consenting processes.'
NPF4 Spatial Principles - Just Transition. 'We will empower people to shape their places.'

Lack of understanding of Cultural Significance: The EIAR makes no reference to the personal, cultural or historical attachment of the population of Lewis to their landscape and heritage, and fails to assess impacts on the living intangible heritage of the Gaelic community. Until a full assessment addressing impacts on Gaelic language and culture, community wellbeing, and west Lewis communities' relationship with their coastline is completed and publicly consulted upon, this application cannot lawfully be determined.
NMP Para. 4.20 'The historic environment includes all aspects of the environment resulting from the interaction between people and places through time.'
NPF4 Policy 7 a 'Development proposals with a potentially significant impact on historic assets or places will be accompanied by an assessment which is based on an understanding of the cultural significance of the historic asset and/or place.'

Significant Adverse Impacts on Protected Birdlife and Habitats: The development occupies primary foraging grounds for the Lewis Peatlands SPA red-throated divers, falls within the foraging range of the St Kilda gannet colony, and crosses a principal UK migratory corridor for protected species, including whooper swan and pink-footed goose. The EIAR fails to adequately assess the threats of collision, displacement, and barrier effects to these declining populations. Thus, consent would breach the **Conservation (Natural Habitats &c.) Regulations 1994**, the **2018 Offshore Regulations**, the **Marine (Scotland) Act 2010**, and the **Wildlife and Countryside Act 1981**, as the proposal is likely to adversely affect the integrity of the following SPA's: Lewis Peatlands, West Coast of the Outer Hebrides, Seas off St Kilda and St Kilda.

NPF4 Policy 7 i 'Development proposals affecting a World Heritage Site or its setting will only be supported where their Outstanding Universal Value is protected and preserved.'

NPF4 Policy 11 e ix Impact on 'biodiversity including impacts on birds' must be addressed.

Failure to Protect the Integrity and Setting of Scheduled Monuments: The EIAR anticipates significant adverse effects on coastal heritage. It fails to assess the impact on key scheduled monuments such as SM13786. The proposal would harm the Calanais monuments and wider historic landscape by introducing an industrial horizon into their natural surroundings, fundamentally undermining the meaning, experience, and interconnected setting of these sites, directly conflicting with **NPF4 Policy 7**. There are many alternative sites for offshore wind development and no reasons of over-riding public interest for choosing this site.

NMP Para. 4.22 'Marine planning should help to ensure that future marine activities and developments can be carried out in a way that respects the marine historic environment and the setting of important coastal heritage assets.' **Para. 4.23** 'Designated assets should be protected in situ within an appropriate setting'.

NPF4 Policy 7 h 'Development proposals affecting scheduled monuments will only be supported where:' ii 'significant adverse impacts on the integrity of the setting of a scheduled monument are avoided; or iii exceptional circumstances have been demonstrated to justify the impact on a scheduled monument and its setting and impacts on the monument or its setting have been minimised.'

Unassessed Onshore Impacts and Breach of Statutory Rights of Crofters: Granting offshore consent while onshore impacts on irreplaceable machair and deep peatland remain unassessed, directly contravenes **NPF4 Policy 3**, which requires biodiversity (including irreplaceable habitats) to be left in a demonstrably better state. In addition the proposal fails to engage the statutory rights of crofters under the **Crofters (Scotland) Act 1993**. **NMP Para. 4.77** *'There should be a presumption in favour of publicising applications for marine and terrestrial components of a development together during consenting processes.'*

Irreparable Harm to the Tourism Economy and Coastal Character: The Spiorad na Mara wind farm would permanently industrialise the unspoiled coastal scenery and dark skies on the Isle of Lewis, destroying the very qualities that attract visitors to the island. Local residents have consistently warned during consultation that this visual impact would decimate the tourist industry on which so many islanders depend. Tourism is built on the area's landscape, seascape, heritage, nature, and dark skies. This development risks long-term damage to local businesses and the wider economy, contrary to **NPF4 Policy 30**.

NMP, Para. 12.28 *'An unspoiled environment, high quality landscape and a sense of closeness to nature are important to many people. Scenery and environmental quality are key factors in attracting visitors to Scotland's coasts,'*

Community Opposition and lack of Community Empowerment: The Community Opinion Survey on the Spiorad na Mara Offshore Wind Farm Development (N4) published by www.emg-lewis.co.uk in April 2026 found that 88% of residents from Ness to Uig opposed the N4 development. Approving this project against such overwhelming local consensus would directly contravene the National Islands Plan's commitment to community empowerment.

The National Islands Plan, page 65, para. 5 *'Our vision is for islanders to be empowered to shape their own priorities, build their futures, and protect what makes their communities unique.'*

My further objection points:

This planning decision is about the long-term future and the character of a landscape and community that cannot be replaced once altered at this scale. Spiorad na Mara Offshore Wind Farm would cause significant, cumulative and largely irreversible harm to landscape and seascape character, heritage setting, and the tourism economy. I respectfully request that this application is rejected.

Yours sincerely,

Subject: Spiorad na Mara Offshore Wind Farm, Isle of Lewis. MD-00011742 and MD-00011743
Date: 04 May 2026 11:20:15

I object to the planning application for the Spiorad na Mara Offshore Wind Farm, application reference MD-00011742 and MD-00011743.

I object for these reasons...

This is the wrong location for such an industrial development, in unspoilt seas off the coast of the Isle of Lewis. The unprecedented size of the turbines, so close to residential areas and areas of cultural and historical significance.

Environmental impact

The Impact on birds and cetaceans, in designated areas for nature conservation. Impacts on SPA's have been identified that will require derogation from the Habitats Regulations. This should not be permitted, it undermines these important designations and protections for our wildlife. These impacts include collision, displacement and loss of feeding opportunities.

This offshore development will also require significant onshore developments that will have impacts with the loss of habitat for important bird populations and impacts on the Lewis Peatlands SPA. Peatlands are recognised as important areas for carbon capture; by disturbing these areas you are adding to the problems your wind turbines are supposed to be combating.

Cultural Heritage and People

The unique crofting culture and the Gaelic speaking community will be significantly impacted across the west coast, particularly for those living in close proximity to the proposed area of turbines, the impact of which has not been taken into account in this proposal. Disturbance, disruption and noise during the construction will be highly unsettling and detrimental for the local community, who are significantly opposed to this development. The health and wellbeing of the community here has so far been disregarded.

Lewis is home to sights of special historic and cultural significance including Scheduled Ancient Monuments; Calanais, Clach an Truiseil and the black houses at Arnol and Gearrannan. All of these sights will be impacted by the turbines. The scale of these turbines is huge. They will be highly visible and intrusive in this seascape.

This would also have an impact on tourism for the area, as those visiting have come to expect to see the pristine and beautiful landscapes the Islands have to offer. As one of the few places left in the UK where you have true dark skies at night, if this this would never be the case again.

Final comments

As a resident, I feel very negative about this proposal and am under the impression

that mine and others objections will not be taken into account, this feels like a 'done deal' and as a community I feel we have been sold out by our councilors and government.

Once again, I object to this planning application.

Yours faithfully.

To: [MD Marine Renewables](#)
Subject: Objection - Spiorad na Mara Offshore Wind Farm (MD-00011742 & MD-00011743)
Date: 04 May 2026 12:55:04

I formally object to the above application as it contravenes the following planning policies and guidance:

Lack of Community Engagement: There was no consultation with the communities of west Lewis before Crown Estate Scotland identified and leased the N4 area for development.

The plan was imposed on them without consent.

Scotland's National Marine Plan (NMP) GEN 18 'Early and effective engagement should be undertaken with the general public and all interested stakeholders to facilitate planning and consenting processes.'

NMP Para. 4.77 'Engagement with the public and other stakeholders should be appropriate, proportionate and meaningful. It should be undertaken as early as possible in planning and consenting processes,'

NPF4 Spatial Principles - Just Transition. 'We will empower people to shape their places.'

Lack of understanding of Cultural Significance: The EIAR makes no reference to the personal, cultural or historical attachment of the population of Lewis to their landscape and heritage, and fails to assess impacts on the living intangible heritage of the Gaelic community. Until a full assessment addressing impacts on Gaelic language and culture, community wellbeing, and west Lewis communities' relationship with their coastline is completed and publicly consulted upon, this application cannot lawfully be determined.

NMP Para. 4.20 'The historic environment includes all aspects of the environment resulting from the interaction between people and places through time,'

NPF4 Policy 7 a 'Development proposals with a potentially significant impact on historic assets or places will be accompanied by an assessment which is based on an understanding of the cultural significance of the historic asset and/or place.'

Significant Adverse Impacts on Protected Birdlife and Habitats: The development occupies primary foraging grounds for the Lewis Peatlands SPA red-throated divers, falls within the foraging range of the St Kilda gannet colony, and crosses a principal UK migratory corridor for protected species, including whooper swan and pink-footed goose. The EIAR fails to adequately assess the threats of collision, displacement, and barrier effects to these declining populations. Thus, consent would breach the Conservation (Natural Habitats &c.) Regulations 1994, the 2018 Offshore Regulations, the Marine (Scotland) Act 2010, and the Wildlife and Countryside Act 1981, as the proposal is likely to adversely affect the integrity of the following SPA's: Lewis Peatlands, West Coast of the Outer Hebrides, Seas off St Kilda and St Kilda.

NPF4 Policy 7 1 'Development proposals affecting a World Heritage Site or its setting will only be supported where their Outstanding Universal Value is protected and preserved.'

NPF4 Policy 11 e ix Impact on 'biodiversity including impacts on birds' must be addressed.

Failure to Protect the Integrity and Setting of Scheduled Monuments: The EIAR anticipates significant adverse effects on coastal heritage. It fails to assess the impact on key scheduled monuments such as SM13786. The proposal would harm the Calanais monuments and wider historic landscape by introducing an industrial horizon into their natural surroundings, fundamentally undermining the meaning, experience, and interconnected setting of these sites, directly conflicting with NPF4 Policy 7. There are many alternative sites for offshore wind development and no reasons of over-riding public

interest for choosing this site.

NMP Para. 4.22 'Marine planning should help to ensure that future marine activities and developments can be carried out in a way that respects the marine historic environment and the setting of important coastal heritage assets.' Para. 4.23 'Designated assets should be protected in situ within an appropriate setting'.

NPF4 Policy 7 h 'Development proposals affecting scheduled monuments will only be supported where:' ii 'significant adverse impacts on the integrity of the setting of a scheduled monument are avoided; or iii exceptional circumstances have been demonstrated to justify the impact on a scheduled monument and its setting and impacts on the monument or its setting have been minimised.'

Unassessed Onshore Impacts and Breach of Statutory Rights of Crofters: Granting offshore consent while onshore impacts on irreplaceable machair and deep peatland remain unassessed, directly contravenes NPF4 Policy 3, which requires biodiversity (including irreplaceable habitats) to be left in a demonstrably better state. In addition the proposal fails to engage the statutory rights of crofters under the Crofters (Scotland) Act 1993.

NMP Para. 4.77 'There should be a presumption in favour of publicising applications for marine and terrestrial components of a development together during consenting processes.'

Irreparable Harm to the Tourism Economy and Coastal Character: The Spiorad na Mara wind farm would permanently industrialise the unspoiled coastal scenery and dark skies on the Isle of Lewis, destroying the very qualities that attract visitors to the island. Local residents have consistently warned during consultation that this visual impact would decimate the tourist industry on which so many islanders depend. Tourism is built on the area's landscape, seascape, heritage, nature, and dark skies. This development risks long-term damage to local businesses and the wider economy, contrary to NPF4 Policy 30.

NMP, Para. 12.28 'An unspoiled environment, high quality landscape and a sense of closeness to nature are important to many people. Scenery and environmental quality are key factors in attracting visitors to Scotland's coasts,'

Community Opposition and lack of Community Empowerment: The Community Opinion Survey on the Spiorad na Mara Offshore Wind Farm Development (N4) published by www.emg-lewis.co.uk in April 2026 found that 88% of residents from Ness to Uig opposed the N4 development. Approving this project against such overwhelming local consensus would directly contravene the National Islands Plan's commitment to community empowerment.

The National Islands Plan, page 65, para. 5 'Our vision is for islanders to be empowered to shape their own priorities, build their futures, and protect what makes their communities unique.'

Significant Adverse Impacts on Marine Mammals and Protected Marine Habitats: The Outer Hebrides are described by the Scottish Government's own scientists as "probably the richest area of the UK for marine mammals with around 20 species of cetacean recorded in the region over the last 30 years" (Scottish Marine and Freshwater Science Vol. 5 No. 9). The site lies adjacent to the Inner Hebrides and Minches SAC - the largest harbour porpoise SAC in Europe - within the wider range of the North-east Lewis MPA for Risso's dolphin, within documented fin and sperm whale migration corridors (Blue Corridors initiative), and within the wider feeding and habitat range of minke, humpback and sei whales, and within the foraging range of the Monach Isles grey seal colony (the largest in Europe). The EIAR fails to reflect this internationally significant baseline in its significance conclusions and cannot demonstrate, to the legal standard required, that adverse effects on these protected sites and species will be avoided. Under the Habitats Regulations Appraisal process, consent must be refused unless Scottish Ministers are satisfied beyond reasonable scientific doubt that the integrity of European sites will not be adversely affected (NatureScot HRA guidance). That standard has not been met.

Construction noise: The developer's own noise modelling (EIAR Appendix 19.2) provides for up to 5.5 hours of percussive piling per day, up to 10,635 strikes per pile per day, hammer energies up to 5,000 kJ, and 1,563 pin piles across two consecutive construction years (April–October). The EIAR itself acknowledges that "harbour porpoises are widely regarded as the most sensitive marine mammal receptor to underwater noise" and that behavioural disturbance can occur up to 70 km from piling (Bailey et al., 2010, cited in Chapter 13). The proposed piling window coincides with peak cetacean seasonal density and with harbour seal pupping (June–July), triggering the prohibition on deliberate disturbance of European Protected Species during breeding and rearing periods under the Conservation of Habitats and Species Regulations 2017 and Section 9 of the Wildlife and Countryside Act 1981.

The developer's own underwater noise modelling (EIAR Appendix 13.3) confirms that, even with noise mitigation applied, percussive piling at the northernmost foundation location generates a PTS (permanent auditory injury) range of up to 1,500 m for low-frequency cetaceans and a TTS (temporary auditory injury) range of up to 49 km. These are the developer's own figures, after mitigation. Low-frequency cetaceans include minke, fin, sei and humpback whales - all species documented in these waters. A 49 km auditory injury zone, repeated across an April–October piling window for two consecutive years, cannot credibly be reconciled with a classification of effects as "not significant."

NMP Policy GEN 13: development should avoid significant adverse effects of man-made noise and vibration on species sensitive to such effects. The EIAR predicts disturbance to 9.186% of the Risso's dolphin management unit population and 27.7% of the coastal bottlenose dolphin population from piling noise, yet classifies these effects as "not significant." GEN 13 sets an avoidance standard, not a tolerance threshold.

The developer's own EPS and Basking Shark Risk Assessment (submitted to Marine Scotland, 22 February 2023) formally acknowledges risk of disturbance to minke whale, harbour porpoise, common dolphin, bottlenose dolphin, grey seal and basking shark from survey work alone. Full construction at this scale cannot credibly be claimed to present a lesser risk.

The 2023 Tolsta Stranding: In July 2023, 54 of 55 long-finned pilot whales died on Traigh Mhòr beach while geophysical surveys were being carried out at this lease area. The Scottish Government investigation could not rule out anthropogenic contribution and explicitly acknowledged limitations in the acoustic detection capability of the recorders used. This recent and devastating event must weigh heavily in this decision.

Priority Marine Features and seabed disturbance: Kelp beds - confirmed present across 10 km² within the Study Area and designated as a PMF and blue carbon habitat - are assessed as sustaining "minor adverse" impact, with no compensatory measures proposed. Maerl beds, horse mussel beds, fan mussel aggregations and cold-water coral reefs (all Scottish PMFs) are either excluded on the basis of decade-old desktop data (Tyler-Walters et al., 2016) or not mentioned at all. The developer concedes that its primary mitigation - micro-siting of turbines and cables - "cannot be quantified until detailed design and further site-specific investigations are complete."

NMP GEN 5: safeguard natural carbon sinks including kelp beds. NMP GEN 9: do not result in significant impact on the national status of Priority Marine Features, and protect and enhance the health of the marine area.

Cumulative and in-combination effects: The Habitats Regulations require assessment of cumulative effects with other plans and projects. The Scottish Government's own 2026 ICIA Screening Report concedes that Scottish offshore wind plans are "likely...to undergo

the derogations process under the Habitats Regulations." Spiorad na Mara is one of several large developments proposed in or adjacent to these waters; the cumulative assessment does not rigorously meet this requirement. NMP GEN 21 requires cumulative impacts affecting the ecosystem to be addressed.

Inadequate assessment and deferred mitigation: The joint representation from the Hebridean Whale and Dolphin Trust and Whale and Dolphin Conservation states that baseline cetacean data is "severely lacking." Proposed mitigation (MMOs, PAM, soft-start) is designed to address acute physical injury, not behavioural displacement; JNCC guidance confirms PAM has "limited range" for harbour porpoise and is "not suitable" for seals and baleen whales. Key mitigation is deferred to a post-consent Marine Mammal Mitigation Protocol, preventing Scottish Ministers from assessing adequacy at the point of determination - contrary to the beyond-reasonable-scientific-doubt standard required under the Habitats Regulations. Peer-reviewed monitoring at Scottish offshore wind farm construction sites (Benhemma-Le Gall et al. 2021, *Frontiers in Marine Science*) observed harbour porpoise displacement up to 12 km from pile-driving and 4 km from construction vessels alone - distances that no MMO, PAM or soft-start zone can address.

The EPS licence contradiction: The EIAR identifies that activities may require an EPS licence due to disturbance at a level requiring legal derogation, while simultaneously concluding residual effects are "negligible or minor." Under the Conservation of Habitats and Species Regulations 2017, an EPS licence can only be granted where no satisfactory alternative exists, imperative reasons of overriding public interest apply, and favourable conservation status is maintained. The EIAR demonstrates none of these. Basking sharks (IUCN Endangered) were recorded by the developer's own July 2023 aerial survey (EIAR Appendix 13.1). The EIAR does not adequately assess EMF impacts from subsea cables on elasmobranchs, despite Scottish Government ScotMER research identifying this as an unresolved evidence gap (FF.07).

No alternative solutions: Under the Habitats Regulations, consent cannot be granted if alternative solutions exist. Other ScotWind sites are available in waters without the same density of European Protected Species and designated habitats, and the existence of those alternatives is directly relevant to whether consent for this site can lawfully proceed. Consent would therefore breach or inadequately address the Conservation (Natural Habitats &c.) Regulations 1994, the Conservation of Habitats and Species Regulations 2017, the Marine (Scotland) Act 2010, Section 9 of the Wildlife and Countryside Act 1981, NMP Policies GEN 5, GEN 9, GEN 13 and GEN 21, and ASCOBANS Resolution 7.6 (2016) on underwater noise.

My further objection points:

For as long as I can remember, we have been taught that we live in a fragile ecosystem on our island which must be conserved and respected. The same could be said about our culture and heritage which faces its own challenges with a changing demographic. I feel the a massive scale industrial project flies in the face of how our island should be treated.

The whole misguided Net Zero pipedream is faltering globally and I don't want our community to be victims of the irreparable environmental damage it causes in the name of supposed "green" policies.

This planning decision is about the long-term future and the character of a landscape and community that cannot be replaced once altered at this scale. Spiorad na Mara Offshore Wind Farm would cause significant, cumulative and largely irreversible harm to landscape

and seascape character, heritage setting, and the tourism economy.
I respectfully request that this application is rejected.

Yours sincerely,

Subject: Spiorad-Na-Mara - Formal Objection
Date: 04 May 2026 12:44:02

I formally object to the above application as it contravenes the following planning policies and guidance:

Lack of Community Engagement: There was no consultation with the communities of west Lewis before Crown Estate Scotland identified and leased the N4 area for development.

The plan was imposed on them without consent.

Scotland's National Marine Plan (NMP) GEN 18 'Early and effective engagement should be undertaken with the general public and all interested stakeholders to facilitate planning and consenting processes.'

NMP Para. 4.77 'Engagement with the public and other stakeholders should be appropriate, proportionate and meaningful. It should be undertaken as early as possible in planning and consenting processes,'

NPF4 Spatial Principles - Just Transition. 'We will empower people to shape their places.'

Lack of understanding of Cultural Significance: The EIAR makes no reference to the personal, cultural or historical attachment of the population of Lewis to their landscape and heritage, and fails to assess impacts on the living intangible heritage of the Gaelic community. Until a full assessment addressing impacts on Gaelic language and culture, community wellbeing, and west Lewis communities' relationship with their coastline is completed and publicly consulted upon, this application cannot lawfully be determined.

NMP Para. 4.20 'The historic environment includes all aspects of the environment resulting from the interaction between people and places through time,'

NPF4 Policy 7 a 'Development proposals with a potentially significant impact on historic assets or places will be accompanied by an assessment which is based on an understanding of the cultural significance of the historic asset and/or place.'

Significant Adverse Impacts on Protected Birdlife and Habitats: The development occupies primary foraging grounds for the Lewis Peatlands SPA red-throated divers, falls within the foraging range of the St Kilda gannet colony, and crosses a principal UK migratory corridor for protected species, including whooper swan and pink-footed goose. The EIAR fails to adequately assess the threats of collision, displacement, and barrier effects to these declining populations. Thus, consent would breach the Conservation (Natural Habitats &c.) Regulations 1994, the 2018 Offshore Regulations, the Marine (Scotland) Act 2010, and the Wildlife and Countryside Act 1981, as the proposal is likely to adversely affect the integrity of the following SPA's: Lewis Peatlands, West Coast of the Outer Hebrides, Seas off St Kilda and St Kilda.

NPF4 Policy 7 1 'Development proposals affecting a World Heritage Site or its setting will only be supported where their Outstanding Universal Value is protected and preserved.'

NPF4 Policy 11 e ix Impact on 'biodiversity including impacts on birds' must be addressed.

Failure to Protect the Integrity and Setting of Scheduled Monuments: The EIAR anticipates significant adverse effects on coastal heritage. It fails to assess the impact on key scheduled monuments such as SM13786. The proposal would harm the Calanais monuments and wider historic landscape by introducing an industrial horizon into their natural surroundings, fundamentally undermining the meaning, experience, and interconnected setting of these sites, directly conflicting with NPF4 Policy 7. There are many alternative sites for offshore wind development and no reasons of over-riding public

interest for choosing this site.

NMP Para. 4.22 'Marine planning should help to ensure that future marine activities and developments can be carried out in a way that respects the marine historic environment and the setting of important coastal heritage assets.' Para. 4.23 'Designated assets should be protected in situ within an appropriate setting'.

NPF4 Policy 7 h 'Development proposals affecting scheduled monuments will only be supported where:' ii 'significant adverse impacts on the integrity of the setting of a scheduled monument are avoided; or iii exceptional circumstances have been demonstrated to justify the impact on a scheduled monument and its setting and impacts on the monument or its setting have been minimised.'

Unassessed Onshore Impacts and Breach of Statutory Rights of Crofters: Granting offshore consent while onshore impacts on irreplaceable machair and deep peatland remain unassessed, directly contravenes NPF4 Policy 3, which requires biodiversity (including irreplaceable habitats) to be left in a demonstrably better state. In addition the proposal fails to engage the statutory rights of crofters under the Crofters (Scotland) Act 1993.

NMP Para. 4.77 'There should be a presumption in favour of publicising applications for marine and terrestrial components of a development together during consenting processes.'

Irreparable Harm to the Tourism Economy and Coastal Character: The Spiorad na Mara wind farm would permanently industrialise the unspoiled coastal scenery and dark skies on the Isle of Lewis, destroying the very qualities that attract visitors to the island. Local residents have consistently warned during consultation that this visual impact would decimate the tourist industry on which so many islanders depend. Tourism is built on the area's landscape, seascape, heritage, nature, and dark skies. This development risks long-term damage to local businesses and the wider economy, contrary to NPF4 Policy 30.

NMP, Para. 12.28 'An unspoiled environment, high quality landscape and a sense of closeness to nature are important to many people. Scenery and environmental quality are key factors in attracting visitors to Scotland's coasts,'

Community Opposition and lack of Community Empowerment: The Community Opinion Survey on the Spiorad na Mara Offshore Wind Farm Development (N4) published by www.emg-lewis.co.uk in April 2026 found that 88% of residents from Ness to Uig opposed the N4 development. Approving this project against such overwhelming local consensus would directly contravene the National Islands Plan's commitment to community empowerment.

The National Islands Plan, page 65, para. 5 'Our vision is for islanders to be empowered to shape their own priorities, build their futures, and protect what makes their communities unique.'

Significant Adverse Impacts on Marine Mammals and Protected Marine Habitats: The Outer Hebrides are described by the Scottish Government's own scientists as "probably the richest area of the UK for marine mammals with around 20 species of cetacean recorded in the region over the last 30 years" (Scottish Marine and Freshwater Science Vol. 5 No. 9). The site lies adjacent to the Inner Hebrides and Minches SAC - the largest harbour porpoise SAC in Europe - within the wider range of the North-east Lewis MPA for Risso's dolphin, within documented fin and sperm whale migration corridors (Blue Corridors initiative), and within the wider feeding and habitat range of minke, humpback and sei whales, and within the foraging range of the Monach Isles grey seal colony (the largest in Europe). The EIAR fails to reflect this internationally significant baseline in its significance conclusions and cannot demonstrate, to the legal standard required, that adverse effects on these protected sites and species will be avoided. Under the Habitats Regulations Appraisal process, consent must be refused unless Scottish Ministers are satisfied beyond reasonable scientific doubt that the integrity of European sites will not be adversely affected (NatureScot HRA guidance). That standard has not been met.

Construction noise: The developer's own noise modelling (EIAR Appendix 19.2) provides for up to 5.5 hours of percussive piling per day, up to 10,635 strikes per pile per day, hammer energies up to 5,000 kJ, and 1,563 pin piles across two consecutive construction years (April–October). The EIAR itself acknowledges that "harbour porpoises are widely regarded as the most sensitive marine mammal receptor to underwater noise" and that behavioural disturbance can occur up to 70 km from piling (Bailey et al., 2010, cited in Chapter 13). The proposed piling window coincides with peak cetacean seasonal density and with harbour seal pupping (June–July), triggering the prohibition on deliberate disturbance of European Protected Species during breeding and rearing periods under the Conservation of Habitats and Species Regulations 2017 and Section 9 of the Wildlife and Countryside Act 1981.

The developer's own underwater noise modelling (EIAR Appendix 13.3) confirms that, even with noise mitigation applied, percussive piling at the northernmost foundation location generates a PTS (permanent auditory injury) range of up to 1,500 m for low-frequency cetaceans and a TTS (temporary auditory injury) range of up to 49 km. These are the developer's own figures, after mitigation. Low-frequency cetaceans include minke, fin, sei and humpback whales - all species documented in these waters. A 49 km auditory injury zone, repeated across an April–October piling window for two consecutive years, cannot credibly be reconciled with a classification of effects as "not significant."

NMP Policy GEN 13: development should avoid significant adverse effects of man-made noise and vibration on species sensitive to such effects. The EIAR predicts disturbance to 9.186% of the Risso's dolphin management unit population and 27.7% of the coastal bottlenose dolphin population from piling noise, yet classifies these effects as "not significant." GEN 13 sets an avoidance standard, not a tolerance threshold.

The developer's own EPS and Basking Shark Risk Assessment (submitted to Marine Scotland, 22 February 2023) formally acknowledges risk of disturbance to minke whale, harbour porpoise, common dolphin, bottlenose dolphin, grey seal and basking shark from survey work alone. Full construction at this scale cannot credibly be claimed to present a lesser risk.

The 2023 Tolsta Stranding: In July 2023, 54 of 55 long-finned pilot whales died on Traigh Mhòr beach while geophysical surveys were being carried out at this lease area. The Scottish Government investigation could not rule out anthropogenic contribution and explicitly acknowledged limitations in the acoustic detection capability of the recorders used. This recent and devastating event must weigh heavily in this decision.

Priority Marine Features and seabed disturbance: Kelp beds - confirmed present across 10 km² within the Study Area and designated as a PMF and blue carbon habitat - are assessed as sustaining "minor adverse" impact, with no compensatory measures proposed. Maerl beds, horse mussel beds, fan mussel aggregations and cold-water coral reefs (all Scottish PMFs) are either excluded on the basis of decade-old desktop data (Tyler-Walters et al., 2016) or not mentioned at all. The developer concedes that its primary mitigation - micro-siting of turbines and cables - "cannot be quantified until detailed design and further site-specific investigations are complete."

NMP GEN 5: safeguard natural carbon sinks including kelp beds. NMP GEN 9: do not result in significant impact on the national status of Priority Marine Features, and protect and enhance the health of the marine area.

Cumulative and in-combination effects: The Habitats Regulations require assessment of cumulative effects with other plans and projects. The Scottish Government's own 2026 ICIA Screening Report concedes that Scottish offshore wind plans are "likely...to undergo

the derogations process under the Habitats Regulations." Spiorad na Mara is one of several large developments proposed in or adjacent to these waters; the cumulative assessment does not rigorously meet this requirement. NMP GEN 21 requires cumulative impacts affecting the ecosystem to be addressed.

Inadequate assessment and deferred mitigation: The joint representation from the Hebridean Whale and Dolphin Trust and Whale and Dolphin Conservation states that baseline cetacean data is "severely lacking." Proposed mitigation (MMOs, PAM, soft-start) is designed to address acute physical injury, not behavioural displacement; JNCC guidance confirms PAM has "limited range" for harbour porpoise and is "not suitable" for seals and baleen whales. Key mitigation is deferred to a post-consent Marine Mammal Mitigation Protocol, preventing Scottish Ministers from assessing adequacy at the point of determination - contrary to the beyond-reasonable-scientific-doubt standard required under the Habitats Regulations. Peer-reviewed monitoring at Scottish offshore wind farm construction sites (Benhemma-Le Gall et al. 2021, *Frontiers in Marine Science*) observed harbour porpoise displacement up to 12 km from pile-driving and 4 km from construction vessels alone - distances that no MMO, PAM or soft-start zone can address.

The EPS licence contradiction: The EIAR identifies that activities may require an EPS licence due to disturbance at a level requiring legal derogation, while simultaneously concluding residual effects are "negligible or minor." Under the Conservation of Habitats and Species Regulations 2017, an EPS licence can only be granted where no satisfactory alternative exists, imperative reasons of overriding public interest apply, and favourable conservation status is maintained. The EIAR demonstrates none of these. Basking sharks (IUCN Endangered) were recorded by the developer's own July 2023 aerial survey (EIAR Appendix 13.1). The EIAR does not adequately assess EMF impacts from subsea cables on elasmobranchs, despite Scottish Government ScotMER research identifying this as an unresolved evidence gap (FF.07).

No alternative solutions: Under the Habitats Regulations, consent cannot be granted if alternative solutions exist. Other ScotWind sites are available in waters without the same density of European Protected Species and designated habitats, and the existence of those alternatives is directly relevant to whether consent for this site can lawfully proceed. Consent would therefore breach or inadequately address the Conservation (Natural Habitats &c.) Regulations 1994, the Conservation of Habitats and Species Regulations 2017, the Marine (Scotland) Act 2010, Section 9 of the Wildlife and Countryside Act 1981, NMP Policies GEN 5, GEN 9, GEN 13 and GEN 21, and ASCOBANS Resolution 7.6 (2016) on underwater noise.

My further objection points:

The island's character will be changed forever by industrialisation.

There will be a significant negative impact on communities, wildlife, fishing and tourism.

This planning decision is about the long-term future and the character of a landscape and community that cannot be replaced once altered at this scale. Spiorad na Mara Offshore Wind Farm would cause significant, cumulative and largely irreversible harm to landscape and seascape character, heritage setting, and the tourism economy.

I respectfully request that this application is rejected.

Yours sincerely,

MD-00011742 & MD-00011743 - Spiorad na Mara Limited - Spiorad na Mara Offshore Wind Farm - Isle of Lewis

I formally object to the above application as it contravenes the following planning policies and guidance:

Lack of Community Engagement: There was no consultation with the communities of west Lewis before Crown Estate Scotland identified and leased the N4 area for development. The plan was imposed on them without consent. **Scotland's National Marine Plan (NMP) GEN 18** *'Early and effective engagement should be undertaken with the general public and all interested stakeholders to facilitate planning and consenting processes.'*

NMP Para. 4.77 *'Engagement with the public and other stakeholders should be appropriate, proportionate and meaningful. It should be undertaken as early as possible in planning and consenting processes.'*

NPF4 Spatial Principles - Just Transition. *'We will empower people to shape their places.'*

Lack of understanding of Cultural Significance: The EIAR makes no reference to the personal, cultural or historical attachment of the population of Lewis to their landscape and heritage, and fails to assess impacts on the living intangible heritage of the Gaelic community. Until a full assessment addressing impacts on Gaelic language and culture, community wellbeing, and west Lewis communities' relationship with their coastline is completed and publicly consulted upon, this application cannot lawfully be determined.

NMP Para. 4.20 *'The historic environment includes all aspects of the environment resulting from the interaction between people and places through time.'*

NPF4 Policy 7 a *'Development proposals with a potentially significant impact on historic assets or places will be accompanied by an assessment which is based on an understanding of the cultural significance of the historic asset and/or place.'*

Significant Adverse Impacts on Protected Birdlife and Habitats: The development occupies primary foraging grounds for the Lewis Peatlands SPA red-throated divers, falls within the foraging range of the St Kilda gannet colony, and crosses a principal UK migratory corridor for protected species, including whooper swan and pink-footed goose. The EIAR fails to adequately assess the threats of collision, displacement, and barrier effects to these declining populations. Thus, consent would breach the **Conservation (Natural Habitats &c.) Regulations 1994**, the **2018 Offshore Regulations**, the **Marine (Scotland) Act 2010**, and the **Wildlife and Countryside Act 1981**, as the proposal is likely to adversely affect the integrity of the following SPA's: Lewis Peatlands, West Coast of the Outer Hebrides, Seas off St Kilda and St Kilda.

NPF4 Policy 7 i *'Development proposals affecting a World Heritage Site or its setting will only be supported where their Outstanding Universal Value is protected and preserved.'*

NPF4 Policy 11 e ix Impact on *'biodiversity including impacts on birds'* must be addressed.

Failure to Protect the Integrity and Setting of Scheduled Monuments: The EIAR anticipates significant adverse effects on coastal heritage. It fails to assess the impact on key scheduled monuments such as SM13786. The proposal would harm the Calanais monuments and wider historic landscape by introducing an industrial horizon into their natural surroundings, fundamentally undermining the meaning, experience, and interconnected setting of these sites, directly conflicting with **NPF4 Policy 7**. There are many alternative sites for offshore wind development and no reasons of over-riding public interest for choosing this site.

NMP Para. 4.22 *'Marine planning should help to ensure that future marine activities and developments can be carried out in a way that respects the marine historic environment and the setting of important coastal heritage assets.'* **Para. 4.23** *'Designated assets should be protected in situ within an appropriate setting.'*

NPF4 Policy 7 h *'Development proposals affecting scheduled monuments will only be supported where:'* ii *'significant adverse impacts on the integrity of the setting of a scheduled monument are avoided; or* iii *exceptional circumstances have been demonstrated to justify the impact on a scheduled monument and its setting and impacts on the monument or its setting have been minimised.'*

Unassessed Onshore Impacts and Breach of Statutory Rights of Crofters: Granting offshore consent while onshore impacts on irreplaceable machair and deep peatland remain unassessed, directly contravenes **NPF4 Policy 3**, which requires biodiversity (including irreplaceable habitats) to be left in a demonstrably better state. In addition the proposal fails to engage the statutory rights of crofters under the **Crofters (Scotland) Act 1993**.

NMP Para. 4.77 *'There should be a presumption in favour of publicising applications for marine and terrestrial components of a development together during consenting processes.'*

Irreparable Harm to the Tourism Economy and Coastal Character: The Spiorad na Mara wind farm would permanently industrialise the unspoiled coastal scenery and dark skies on the Isle of Lewis, destroying the very qualities that attract visitors to the island. Local residents have consistently warned during consultation that this visual impact would decimate the tourist industry on which so many islanders depend. Tourism is built on the area's landscape, seascape, heritage, nature, and dark skies. This development risks long-term damage to local businesses and the wider economy, contrary to **NPF4 Policy 30**.

NMP, Para. 12.28 *'An unspoiled environment, high quality landscape and a sense of closeness to nature are important to many people. Scenery and environmental quality are key factors in attracting visitors to Scotland's coasts,'*

Community Opposition and lack of Community Empowerment: The Community Opinion Survey on the Spiorad na Mara Offshore Wind Farm Development (N4) published by www.emg-lewis.co.uk in April 2026 found that 88% of residents from Ness to Uig opposed the N4 development. Approving this project against such overwhelming local consensus would directly contravene the National Islands Plan's commitment to community empowerment.

The National Islands Plan, page 65, para. 5 *'Our vision is for islanders to be empowered to shape their own priorities, build their futures, and protect what makes their communities unique.'*

My further objection points:

This planning decision is about the long-term future and the character of a landscape and community that cannot be replaced once altered at this scale. Spiorad na Mara Offshore Wind Farm would cause significant, cumulative and largely irreversible harm to landscape and seascape character, heritage setting, and the tourism economy.

I respectfully request that this application is rejected.

NPF4 Spatial Principles - Just Transition. *'We will empower people to shape their places.'*

Lack of understanding of Cultural Significance: The EIAR makes no reference to the personal, cultural or historical attachment of the population of Lewis to their landscape and heritage, and fails to assess impacts on the living intangible heritage of the Gaelic community. Until a full assessment addressing impacts on Gaelic language and culture, community wellbeing, and west Lewis communities' relationship with their coastline is completed and publicly consulted upon, this application cannot lawfully be determined.

NMP Para. 4.20 *'The historic environment includes all aspects of the environment resulting from the interaction between people and places through time.'*

NPF4 Policy 7 a *'Development proposals with a potentially significant impact on historic assets or places will be accompanied by an assessment which is based on an understanding of the cultural significance of the historic asset and/or place.'*

Significant Adverse Impacts on Protected Birdlife and Habitats: The development occupies primary foraging grounds for the Lewis Peatlands SPA red-throated divers, falls within the foraging range of the St Kilda gannet colony, and crosses a principal UK migratory corridor for protected species, including whooper swan and pink-footed goose. The EIAR fails to adequately assess the threats of collision, displacement, and barrier effects to these declining populations. Thus, consent would breach the **Conservation (Natural Habitats &c.) Regulations 1994**, the **2018 Offshore Regulations**, the **Marine (Scotland) Act 2010**, and the **Wildlife and Countryside Act 1981**, as the proposal is likely to adversely affect the integrity of the following SPA's: Lewis Peatlands, West Coast of the Outer Hebrides, Seas off St Kilda and St Kilda.

NPF4 Policy 7 I *'Development proposals affecting a World Heritage Site or its setting will only be supported where their Outstanding Universal Value is protected and preserved.'*

NPF4 Policy 11 e ix Impact on *'biodiversity including impacts on birds'* must be addressed.

Failure to Protect the Integrity and Setting of Scheduled Monuments: The EIAR anticipates significant adverse effects on coastal heritage. It fails to assess the impact on key scheduled monuments such as SM13786. The proposal would harm the Calanais monuments and wider historic landscape by introducing an industrial horizon into their natural surroundings, fundamentally undermining the meaning, experience, and interconnected setting of these sites, directly conflicting with **NPF4 Policy 7**. There are many alternative sites for offshore wind development and no reasons of over-riding public interest for choosing this site.

NMP Para. 4.22 *'Marine planning should help to ensure that future marine activities and developments can be carried out in a way that respects the marine historic environment and the setting of important coastal heritage assets.'* **Para. 4.23** *'Designated assets should be protected in situ within an appropriate setting.'*

NPF4 Policy 7 h *'Development proposals affecting scheduled monuments will only be supported where: ii 'significant adverse impacts on the integrity of the setting of a scheduled monument are avoided; or iii exceptional circumstances*

Photomontage visualisation by Northland Power - Barvas

have been demonstrated to justify the impact on a scheduled monument and its setting and impacts on the monument or its setting have been minimised.'

Unassessed Onshore Impacts and Breach of Statutory Rights of Crofters: Granting offshore consent while onshore impacts on irreplaceable machair and deep peatland remain unassessed, directly contravenes **NPF4 Policy 3**, which requires biodiversity (including irreplaceable habitats) to be left in a demonstrably better state. In addition the proposal fails to engage the statutory rights of crofters under the **Crofters (Scotland) Act 1993**.

NMP Para. 4.77 *'There should be a presumption in favour of publicising applications for marine and terrestrial components of a development together during consenting processes.'*

Irreparable Harm to the Tourism Economy and Coastal Character: The Spiorad na Mara wind farm would permanently industrialise the unspoiled coastal scenery and dark skies on the Isle of Lewis, destroying the very qualities that attract visitors to the island. Local residents have consistently warned during consultation that this visual impact would decimate the tourist industry on which so many islanders depend. Tourism is built on the area's landscape, seascape, heritage, nature, and dark skies. This development risks long-term damage to local businesses and the wider economy, contrary to **NPF4 Policy 30**.

NMP, Para. 12.28 *'An unspoiled environment, high quality landscape and a sense of closeness to nature are important to many people. Scenery and environmental quality are key factors in attracting visitors to Scotland's coasts,'*

Community Opposition and lack of Community Empowerment: The Community Opinion Survey on the Spiorad na Mara Offshore Wind Farm Development (N4) published by www.emg-lewis.co.uk in April 2026 found that 88% of residents from Ness to Uig opposed the N4 development. Approving this project against such overwhelming local consensus would directly contravene the National Islands Plan's commitment to community empowerment.

The National Islands Plan, page 65, para. 5 *'Our vision is for islanders to be empowered to shape their own priorities, build their futures, and protect what makes their communities unique.'*

My further objection points:

The impact this will have on nature and the environment is my main concern, but I do feel strongly about all the other points of objection that are listed above.

As a young person who was born and raised here on the Isle of Lewis, and one of the few who has decided to remain, and wishes to stay – the idea of these turbines destroying the local unspoiled nature, wildlife and environment makes me sick to my stomach, as it does many others. I do not want our beautiful views and unique landscapes ruined by industrial machines and construction sites. These turbines are going to be eyesores on our majestic coastlines. People have few enough reasons to choose to live in this place. This won't help anything!

This planning decision is about the long-term future and the character of a landscape and community that cannot be replaced once altered at this scale. Spiorad na Mara Offshore Wind Farm would cause significant, cumulative and largely irreversible harm to landscape and seascape character, heritage setting, and the tourism economy.

I respectfully request that this application is rejected.

Yours sincerely,

MD-00011742 & MD-00011743 - Spiorad na Mara Limited - Spiorad na Mara Offshore Wind Farm - Isle of Lewis

I formally object to the above application as it contravenes the following planning policies and guidance:

Lack of Community Engagement: There was no consultation with the communities of west Lewis before Crown Estate Scotland identified and leased the N4 area for development. The plan was imposed on them without consent. **Scotland's National Marine Plan (NMP) GEN 18** *'Early and effective engagement should be undertaken with the general public and all interested stakeholders to facilitate planning and consenting processes.'*
NMP Para. 4.77 *'Engagement with the public and other stakeholders should be appropriate, proportionate and meaningful. It should be undertaken as early as possible in planning and consenting processes.'*
NPF4 Spatial Principles - Just Transition. *'We will empower people to shape their places.'*

Lack of understanding of Cultural Significance: The EIAR makes no reference to the personal, cultural or historical attachment of the population of Lewis to their landscape and heritage, and fails to assess impacts on the living intangible heritage of the Gaelic community. Until a full assessment addressing impacts on Gaelic language and culture, community wellbeing, and west Lewis communities' relationship with their coastline is completed and publicly consulted upon, this application cannot lawfully be determined.

NMP Para. 4.20 *'The historic environment includes all aspects of the environment resulting from the interaction between people and places through time.'*

NPF4 Policy 7 a *'Development proposals with a potentially significant impact on historic assets or places will be accompanied by an assessment which is based on an understanding of the cultural significance of the historic asset and/or place.'*

Significant Adverse Impacts on Protected Birdlife and Habitats: The development occupies primary foraging grounds for the Lewis Peatlands SPA red-throated divers, falls within the foraging range of the St Kilda gannet colony, and crosses a principal UK migratory corridor for protected species, including whooper swan and pink-footed goose. The EIAR fails to adequately assess the threats of collision, displacement, and barrier effects to these declining populations. Thus, consent would breach the **Conservation (Natural Habitats &c.) Regulations 1994**, the **2018 Offshore Regulations**, the **Marine (Scotland) Act 2010**, and the **Wildlife and Countryside Act 1981**, as the proposal is likely to adversely affect the integrity of the following SPA's: Lewis Peatlands, West Coast of the Outer Hebrides, Seas off St Kilda and St Kilda.

NPF4 Policy 7 I *'Development proposals affecting a World Heritage Site or its setting will only be supported where their Outstanding Universal Value is protected and preserved.'*

NPF4 Policy 11 e ix Impact on 'biodiversity including impacts on birds' must be addressed.

Failure to Protect the Integrity and Setting of Scheduled Monuments: The EIAR anticipates significant adverse effects on coastal heritage. It fails to assess the impact on key scheduled monuments such as SM13786. The proposal would harm the Calanais monuments and wider historic landscape by introducing an industrial horizon into their natural surroundings, fundamentally undermining the meaning, experience, and interconnected setting of these sites, directly conflicting with **NPF4 Policy 7**. There are many alternative sites for offshore wind development and no reasons of over-riding public interest for choosing this site.

NMP Para. 4.22 *'Marine planning should help to ensure that future marine activities and developments can be carried out in a way that respects the marine historic environment and the setting of important coastal heritage assets.'* **Para. 4.23** *'Designated assets should be protected in situ within an appropriate setting.'*

NPF4 Policy 7 h *'Development proposals affecting scheduled monuments will only be supported where: ii 'significant adverse impacts on the integrity of the setting of a scheduled monument are avoided; or iii exceptional circumstances*

Photomontage visualisation by Northland Power - Barvas

have been demonstrated to justify the impact on a scheduled monument and its setting and impacts on the monument or its setting have been minimised.'

Unassessed Onshore Impacts and Breach of Statutory Rights of Crofters: Granting offshore consent while onshore impacts on irreplaceable machair and deep peatland remain unassessed, directly contravenes **NPF4 Policy 3**, which requires biodiversity (including irreplaceable habitats) to be left in a demonstrably better state. In addition the proposal fails to engage the statutory rights of crofters under the **Crofters (Scotland) Act 1993**.

NMP Para. 4.77 *'There should be a presumption in favour of publicising applications for marine and terrestrial components of a development together during consenting processes.'*

Irreparable Harm to the Tourism Economy and Coastal Character: The Spiorad na Mara wind farm would permanently industrialise the unspoiled coastal scenery and dark skies on the Isle of Lewis, destroying the very qualities that attract visitors to the island. Local residents have consistently warned during consultation that this visual impact would decimate the tourist industry on which so many islanders depend. Tourism is built on the area's landscape, seascape, heritage, nature, and dark skies. This development risks long-term damage to local businesses and the wider economy, contrary to **NPF4 Policy 30**.

NMP, Para. 12.28 *'An unspoiled environment, high quality landscape and a sense of closeness to nature are important to many people. Scenery and environmental quality are key factors in attracting visitors to Scotland's coasts,'*

Community Opposition and lack of Community Empowerment: The Community Opinion Survey on the Spiorad na Mara Offshore Wind Farm Development (N4) published by www.emg-lewis.co.uk in April 2026 found that 88% of residents from Ness to Uig opposed the N4 development. Approving this project against such overwhelming local consensus would directly contravene the National Islands Plan's commitment to community empowerment.

The National Islands Plan, page 65, para. 5 *'Our vision is for islanders to be empowered to shape their own priorities, build their futures, and protect what makes their communities unique.'*

My further objection points:

This planning decision is about the long-term future and the character of a landscape and community that cannot be replaced once altered at this scale. Spiorad na Mara Offshore Wind Farm would cause significant, cumulative and largely irreversible harm to landscape and seascape character, heritage setting, and the tourism economy.

I respectfully request that this application is rejected.

Yours sincerely,
