

DECOMMISSIONING PLAN

Site Name or Description of Operation: CLIMAVORE CLIP / Uig

Site/Operation Location(s): Uig Bay, Isle of Skye

Plan period: 6 years

Site Manager: Shona Cameron

Following the end of the lease we will have either:

- 1) ***Applied for a new license with Marine Scotland*** - this will be done if this feasibility test yields positive results in growth.
- 2) ***Removed all structures from the site*** - this will be done if this feasibility test yields unfavourable growth results or we do not have funding to continue beyond the initial lease.

Decommissioning detail:

All deposits are between mean high water spring tide and mean low water spring tide. These structures can be removed easily by hand during a low spring tide.

We will remove the physical structures and decontaminate them off site in our shed facility to ensure no run off onto other land/water. This will be done by cleaning with fresh water and removing any species such as barnacles from the structure.
