

ALEX BUTTER LANDSCAPING LTD

West Countlich Farm Kindallachan Ballinluig
Perthshire PH9 0NW

Method of Works Marine License Application

Alex Butter Landscaping intend to carry out the works required to replace concrete which is missing from the sewage outfall from Shell Bay Holiday Park, KY9 1HB.

The work involves assessing the beach where the pipe is through an SSSI, we have inspected the area and will access the area on the existing track where the sewage tanks are located, there is a turning head which we will use as our loading and unloading area. The works involve the following plant:

- 1 no. 3.0 Tonne rubber tracked excavator
- 1 no. 2.5 Tonne rubber tracked dumper

Both machines have a very low ground pressure.

As landscapers our teams are skilled operatives with diverse skills and have worked on similar projects where controls to ensure the environment is not affected adversely.

The beach area work will be confined to a close proximity to the pipe, we will gather some stone approximately 500mm average size and set along the areas of exposed pipe and use as a shutter. We will then infill with a marine specification mix, approximately 6m³ which will be from a vehicle that mixes as required to eliminate waste and permit us time to lay tidy and with care, the beach will be accessed by a ramp and any disturbance rectified on completion.

As professional landscapers Alex Butter Landscaping Ltd will be carried out with due care and to the plan we have compiled with Mr Bryan Simpson, the site manager.

We are members of Achilles; we enclose a copy of our last audit in 2024 where you can see our marks are high.

We suggest the track marks left after the operation will be gone after one high tide.

We can confirm we understand the plan and will follow the procedure.
