I formally object to the above application

From: [REDACTED]
To: [MD Marine Renewables](#)
Subject: Objection - Spiorad na Mara Offshore Wind Farm (MD-00011742 & MD-00011743)
Date: 30 April 2026 14:06:55

I formally object to the above application as it contravenes the following planning policies and guidance:

Lack of Community Engagement: There was no consultation with the communities of west Lewis before Crown Estate Scotland identified and leased the N4 area for development.

The plan was imposed on them without consent.

Scotland's National Marine Plan (NMP) GEN 18 'Early and effective engagement should be undertaken with the general public and all interested stakeholders to facilitate planning and consenting processes.'

NMP Para. 4.77 'Engagement with the public and other stakeholders should be appropriate, proportionate and meaningful. It should be undertaken as early as possible in planning and consenting processes,'

NPF4 Spatial Principles - Just Transition. 'We will empower people to shape their places.'

Lack of understanding of Cultural Significance: The EIAR makes no reference to the personal, cultural or historical attachment of the population of Lewis to their landscape and heritage, and fails to assess impacts on the living intangible heritage of the Gaelic community. Until a full assessment addressing impacts on Gaelic language and culture, community wellbeing, and west Lewis communities' relationship with their coastline is completed and publicly consulted upon, this application cannot lawfully be determined.

NMP Para. 4.20 'The historic environment includes all aspects of the environment resulting from the interaction between people and places through time,'

NPF4 Policy 7 a 'Development proposals with a potentially significant impact on historic assets or places will be accompanied by an assessment which is based on an understanding of the cultural significance of the historic asset and/or place.'

Significant Adverse Impacts on Protected Birdlife and Habitats: The development occupies primary foraging grounds for the Lewis Peatlands SPA red-throated divers, falls within the foraging range of the St Kilda gannet colony, and crosses a principal UK migratory corridor for protected species, including whooper swan and pink-footed goose. The EIAR fails to adequately assess the threats of collision, displacement, and barrier effects to these declining populations. Thus, consent would breach the Conservation (Natural Habitats &c.) Regulations 1994, the 2018 Offshore Regulations, the Marine (Scotland) Act 2010, and the Wildlife and Countryside Act 1981, as the proposal is likely to adversely affect the integrity of the following SPA's: Lewis Peatlands, West Coast of the Outer Hebrides, Seas off St Kilda and St Kilda.

NPF4 Policy 7 1 'Development proposals affecting a World Heritage Site or its setting will only be supported where their Outstanding Universal Value is protected and preserved.'

NPF4 Policy 11 e ix Impact on 'biodiversity including impacts on birds' must be addressed.

Failure to Protect the Integrity and Setting of Scheduled Monuments: The EIAR anticipates significant adverse effects on coastal heritage. It fails to assess the impact on key scheduled monuments such as SM13786. The proposal would harm the Calanais monuments and wider historic landscape by introducing an industrial horizon into their natural surroundings, fundamentally undermining the meaning, experience, and interconnected setting of these sites, directly conflicting with NPF4 Policy 7. There are many alternative sites for offshore wind development and no reasons of over-riding public

interest for choosing this site.

NMP Para. 4.22 'Marine planning should help to ensure that future marine activities and developments can be carried out in a way that respects the marine historic environment and the setting of important coastal heritage assets.' Para. 4.23 'Designated assets should be protected in situ within an appropriate setting'.

NPF4 Policy 7 h 'Development proposals affecting scheduled monuments will only be supported where:' ii 'significant adverse impacts on the integrity of the setting of a scheduled monument are avoided; or iii exceptional circumstances have been demonstrated to justify the impact on a scheduled monument and its setting and impacts on the monument or its setting have been minimised.'

Unassessed Onshore Impacts and Breach of Statutory Rights of Crofters: Granting offshore consent while onshore impacts on irreplaceable machair and deep peatland remain unassessed, directly contravenes NPF4 Policy 3, which requires biodiversity (including irreplaceable habitats) to be left in a demonstrably better state. In addition the proposal fails to engage the statutory rights of crofters under the Crofters (Scotland) Act 1993.

NMP Para. 4.77 'There should be a presumption in favour of publicising applications for marine and terrestrial components of a development together during consenting processes.'

Irreparable Harm to the Tourism Economy and Coastal Character: The Spiorad na Mara wind farm would permanently industrialise the unspoiled coastal scenery and dark skies on the Isle of Lewis, destroying the very qualities that attract visitors to the island. Local residents have consistently warned during consultation that this visual impact would decimate the tourist industry on which so many islanders depend. Tourism is built on the area's landscape, seascape, heritage, nature, and dark skies. This development risks long-term damage to local businesses and the wider economy, contrary to NPF4 Policy 30.

NMP, Para. 12.28 'An unspoiled environment, high quality landscape and a sense of closeness to nature are important to many people. Scenery and environmental quality are key factors in attracting visitors to Scotland's coasts,'

Community Opposition and lack of Community Empowerment: The Community Opinion Survey on the Spiorad na Mara Offshore Wind Farm Development (N4) published by www.emg-lewis.co.uk in April 2026 found that 88% of residents from Ness to Uig opposed the N4 development. Approving this project against such overwhelming local consensus would directly contravene the National Islands Plan's commitment to community empowerment.

The National Islands Plan, page 65, para. 5 'Our vision is for islanders to be empowered to shape their own priorities, build their futures, and protect what makes their communities unique.'

Significant Adverse Impacts on Marine Mammals and Protected Marine Habitats: The Outer Hebrides are described by the Scottish Government's own scientists as "probably the richest area of the UK for marine mammals with around 20 species of cetacean recorded in the region over the last 30 years" (Scottish Marine and Freshwater Science Vol. 5 No. 9). The site lies adjacent to the Inner Hebrides and Minches SAC - the largest harbour porpoise SAC in Europe - within the wider range of the North-east Lewis MPA for Risso's dolphin, within documented fin and sperm whale migration corridors (Blue Corridors initiative), and within the wider feeding and habitat range of minke, humpback and sei whales, and within the foraging range of the Monach Isles grey seal colony (the largest in Europe). The EIAR fails to reflect this internationally significant baseline in its significance conclusions and cannot demonstrate, to the legal standard required, that adverse effects on these protected sites and species will be avoided. Under the Habitats Regulations Appraisal process, consent must be refused unless Scottish Ministers are satisfied beyond reasonable scientific doubt that the integrity of European sites will not be adversely affected (NatureScot HRA guidance). That standard has not been met.

Construction noise: The developer's own noise modelling (EIAR Appendix 19.2) provides for up to 5.5 hours of percussive piling per day, up to 10,635 strikes per pile per day, hammer energies up to 5,000 kJ, and 1,563 pin piles across two consecutive construction years (April–October). The EIAR itself acknowledges that "harbour porpoises are widely regarded as the most sensitive marine mammal receptor to underwater noise" and that behavioural disturbance can occur up to 70 km from piling (Bailey et al., 2010, cited in Chapter 13). The proposed piling window coincides with peak cetacean seasonal density and with harbour seal pupping (June–July), triggering the prohibition on deliberate disturbance of European Protected Species during breeding and rearing periods under the Conservation of Habitats and Species Regulations 2017 and Section 9 of the Wildlife and Countryside Act 1981.

The developer's own underwater noise modelling (EIAR Appendix 13.3) confirms that, even with noise mitigation applied, percussive piling at the northernmost foundation location generates a PTS (permanent auditory injury) range of up to 1,500 m for low-frequency cetaceans and a TTS (temporary auditory injury) range of up to 49 km. These are the developer's own figures, after mitigation. Low-frequency cetaceans include minke, fin, sei and humpback whales - all species documented in these waters. A 49 km auditory injury zone, repeated across an April–October piling window for two consecutive years, cannot credibly be reconciled with a classification of effects as "not significant."

NMP Policy GEN 13: development should avoid significant adverse effects of man-made noise and vibration on species sensitive to such effects. The EIAR predicts disturbance to 9.186% of the Risso's dolphin management unit population and 27.7% of the coastal bottlenose dolphin population from piling noise, yet classifies these effects as "not significant." GEN 13 sets an avoidance standard, not a tolerance threshold.

The developer's own EPS and Basking Shark Risk Assessment (submitted to Marine Scotland, 22 February 2023) formally acknowledges risk of disturbance to minke whale, harbour porpoise, common dolphin, bottlenose dolphin, grey seal and basking shark from survey work alone. Full construction at this scale cannot credibly be claimed to present a lesser risk.

The 2023 Tolsta Stranding: In July 2023, 54 of 55 long-finned pilot whales died on Traigh Mhòr beach while geophysical surveys were being carried out at this lease area. The Scottish Government investigation could not rule out anthropogenic contribution and explicitly acknowledged limitations in the acoustic detection capability of the recorders used. This recent and devastating event must weigh heavily in this decision.

Priority Marine Features and seabed disturbance: Kelp beds - confirmed present across 10 km² within the Study Area and designated as a PMF and blue carbon habitat - are assessed as sustaining "minor adverse" impact, with no compensatory measures proposed. Maerl beds, horse mussel beds, fan mussel aggregations and cold-water coral reefs (all Scottish PMFs) are either excluded on the basis of decade-old desktop data (Tyler-Walters et al., 2016) or not mentioned at all. The developer concedes that its primary mitigation - micro-siting of turbines and cables - "cannot be quantified until detailed design and further site-specific investigations are complete."

NMP GEN 5: safeguard natural carbon sinks including kelp beds. NMP GEN 9: do not result in significant impact on the national status of Priority Marine Features, and protect and enhance the health of the marine area.

Cumulative and in-combination effects: The Habitats Regulations require assessment of cumulative effects with other plans and projects. The Scottish Government's own 2026 ICIA Screening Report concedes that Scottish offshore wind plans are "likely...to undergo

the derogations process under the Habitats Regulations." Spiorad na Mara is one of several large developments proposed in or adjacent to these waters; the cumulative assessment does not rigorously meet this requirement. NMP GEN 21 requires cumulative impacts affecting the ecosystem to be addressed.

Inadequate assessment and deferred mitigation: The joint representation from the Hebridean Whale and Dolphin Trust and Whale and Dolphin Conservation states that baseline cetacean data is "severely lacking." Proposed mitigation (MMOs, PAM, soft-start) is designed to address acute physical injury, not behavioural displacement; JNCC guidance confirms PAM has "limited range" for harbour porpoise and is "not suitable" for seals and baleen whales. Key mitigation is deferred to a post-consent Marine Mammal Mitigation Protocol, preventing Scottish Ministers from assessing adequacy at the point of determination - contrary to the beyond-reasonable-scientific-doubt standard required under the Habitats Regulations. Peer-reviewed monitoring at Scottish offshore wind farm construction sites (Benhemma-Le Gall et al. 2021, *Frontiers in Marine Science*) observed harbour porpoise displacement up to 12 km from pile-driving and 4 km from construction vessels alone - distances that no MMO, PAM or soft-start zone can address.

The EPS licence contradiction: The EIAR identifies that activities may require an EPS licence due to disturbance at a level requiring legal derogation, while simultaneously concluding residual effects are "negligible or minor." Under the Conservation of Habitats and Species Regulations 2017, an EPS licence can only be granted where no satisfactory alternative exists, imperative reasons of overriding public interest apply, and favourable conservation status is maintained. The EIAR demonstrates none of these. Basking sharks (IUCN Endangered) were recorded by the developer's own July 2023 aerial survey (EIAR Appendix 13.1). The EIAR does not adequately assess EMF impacts from subsea cables on elasmobranchs, despite Scottish Government ScotMER research identifying this as an unresolved evidence gap (FF.07).

No alternative solutions: Under the Habitats Regulations, consent cannot be granted if alternative solutions exist. Other ScotWind sites are available in waters without the same density of European Protected Species and designated habitats, and the existence of those alternatives is directly relevant to whether consent for this site can lawfully proceed. Consent would therefore breach or inadequately address the Conservation (Natural Habitats &c.) Regulations 1994, the Conservation of Habitats and Species Regulations 2017, the Marine (Scotland) Act 2010, Section 9 of the Wildlife and Countryside Act 1981, NMP Policies GEN 5, GEN 9, GEN 13 and GEN 21, and ASCOBANS Resolution 7.6 (2016) on underwater noise.

My further objection points:

They are a complete waste of time, are not green because they use lots of oil, copper, other metals and need electricity to control them. And they are an eyesore, cause health problems like tinnitus for and mental health issues for those living near them.

This planning decision is about the long-term future and the character of a landscape and community that cannot be replaced once altered at this scale. Spiorad na Mara Offshore Wind Farm would cause significant, cumulative and largely irreversible harm to landscape and seascape character, heritage setting, and the tourism economy. I respectfully request that this application is rejected.

Yours sincerely,

MD-00011742 & MD-00011743 - Spiorad na Mara Limited - Spiorad na Mara Offshore Wind Farm - Isle of Lewis

I formally object to the above application as it contravenes the following planning policies and guidance:

Lack of Community Engagement: There was no consultation with the communities of west Lewis before Crown Estate Scotland identified and leased the N4 area for development. The plan was imposed on them without consent.

Scotland's National Marine Plan (NMP) GEN 18 'Early and effective engagement should be undertaken with the general public and all interested stakeholders to facilitate planning and consenting processes.'

NMP Para. 4.77 'Engagement with the public and other stakeholders should be appropriate, proportionate and meaningful. It should be undertaken as early as possible in planning and consenting processes.'

NPF4 Spatial Principles - Just Transition. 'We will empower people to shape their places.'

Lack of understanding of Cultural Significance: The EIAR makes no reference to the personal, cultural or historical attachment of the population of Lewis to their landscape and heritage, and fails to assess impacts on the living intangible heritage of the Gaelic community. Until a full assessment addressing impacts on Gaelic language and culture, community wellbeing, and west Lewis communities' relationship with their coastline is completed and publicly consulted upon, this application cannot lawfully be determined.

NMP Para. 4.20 'The historic environment includes all aspects of the environment resulting from the interaction between people and places through time.'

NPF4 Policy 7 a 'Development proposals with a potentially significant impact on historic assets or places will be accompanied by an assessment which is based on an understanding of the cultural significance of the historic asset and/or place.'

Significant Adverse Impacts on Protected Birdlife and Habitats: The development occupies primary foraging grounds for the Lewis Peatlands SPA red-throated divers, falls within the foraging range of the St Kilda gannet colony, and crosses a principal UK migratory corridor for protected species, including whooper swan and pink-footed goose. The EIAR fails to adequately assess the threats of collision, displacement, and barrier effects to these declining populations. Thus, consent would breach the Conservation (Natural Habitats &c.) Regulations 1994, the 2018 Offshore Regulations, the Marine (Scotland) Act 2010, and the Wildlife and Countryside Act 1981, as the proposal is likely to adversely affect the integrity of the following SPA's: Lewis Peatlands, West Coast of the Outer Hebrides, Seas off St Kilda and St Kilda.

NPF4 Policy 7 i 'Development proposals affecting a World Heritage Site or its setting will only be supported where their Outstanding Universal Value is protected and preserved.'

NPF4 Policy 11 e ix Impact on 'biodiversity including impacts on birds' must be addressed.

Failure to Protect the Integrity and Setting of Scheduled Monuments: The EIAR anticipates significant adverse effects on coastal heritage. It fails to assess the impact on key scheduled monuments such as SM13786. The proposal would harm the Calanais monuments and wider historic landscape by introducing an industrial horizon into their natural surroundings, fundamentally undermining the meaning, experience, and interconnected setting of these sites, directly conflicting with NPF4 Policy 7. There are many alternative sites for offshore wind development and no reasons of over-riding public interest for choosing this site.

NMP Para. 4.22 'Marine planning should help to ensure that future marine activities and developments can be carried out in a way that respects the marine historic environment and the setting of important coastal heritage assets.' Para. 4.23 'Designated assets should be protected in situ within an appropriate setting'.

NPF4 Policy 7 h 'Development proposals affecting scheduled monuments will only be supported where: ii 'significant adverse impacts on the integrity of the setting of a scheduled monument are avoided; or iii exceptional circumstances have been demonstrated to justify the impact on a scheduled monument and its setting and impacts on the monument or its setting have been minimised.'

Unassessed Onshore Impacts and Breach of Statutory Rights of Crofters: Granting offshore consent while onshore impacts on irreplaceable machair and deep peatland remain unassessed, directly contravenes NPF4 Policy 3, which requires biodiversity (including irreplaceable habitats) to be left in a demonstrably better state. In addition the proposal fails to engage the statutory rights of crofters under the Crofters (Scotland) Act 1993.

NMP Para. 4.77 'There should be a presumption in favour of publicising applications for marine and terrestrial components of a development together during consenting processes.'

Irreparable Harm to the Tourism Economy and Coastal Character: The Spiorad na Mara wind farm would permanently industrialise the unspoiled coastal scenery and dark skies on the Isle of Lewis, destroying the very

qualities that attract visitors to the island. Local residents have consistently warned during consultation that this visual impact would decimate the tourist industry on which so many islanders depend. Tourism is built on the area's landscape, seascape, heritage, nature, and dark skies. This development risks long-term damage to local businesses and the wider economy, contrary to NPF4 Policy 30.

NMP, Para. 12.28 'An unspoiled environment, high quality landscape and a sense of closeness to nature are important to many people. Scenery and environmental quality are key factors in attracting visitors to Scotland's coasts,'

Community Opposition and lack of Community Empowerment: The Community Opinion Survey on the Spiorad na Mara Offshore Wind Farm Development (N4) published by www.emg-lewis.co.uk in April 2026 found that 88% of residents from Ness to Uig opposed the N4 development. Approving this project against such overwhelming local consensus would directly contravene the National Islands Plan's commitment to community empowerment.

The National Islands Plan, page 65, para. 5 'Our vision is for islanders to be empowered to shape their own priorities, build their futures, and protect what makes their communities unique.'

My further objection points:

This planning decision is about the long-term future and the character of a landscape and community that cannot be replaced once altered at this scale. Spiorad na Mara Offshore Wind Farm would cause significant, cumulative and largely irreversible harm to landscape and seascape character, heritage setting, and the tourism economy. I respectfully request that this application is rejected.

NMP Para. 4.77 'There should be a presumption in favour of publicising applications for marine and terrestrial components of a development together during consenting processes.' Irreparable Harm to the Tourism Economy and Coastal Character: The Spiorad na Mara wind farm would permanently industrialise the unspoiled coastal scenery and dark skies on the Isle of Lewis, destroying the very qualities that attract visitors to the island. Local residents have consistently warned during consultation that this visual impact would decimate the tourist industry on which so many islanders depend. Tourism is built on the area's landscape, seascape, heritage, nature, and dark skies. This development risks long-term damage to local businesses and the wider economy, contrary to NPF4 Policy 30. NMP, Para. 12.28 'An unspoiled environment, high quality landscape and a sense of closeness to nature are important to many people. Scenery and environmental quality are key factors in attracting visitors to Scotland's coasts,' Community Opposition and lack of Community Empowerment: The Community Opinion Survey on the Spiorad na Mara Offshore Wind Farm Development (N4) published by www.emg-lewis.co.uk in April 2026 found that 88% of residents from Ness to Uig opposed the N4 development. Approving this project against such overwhelming local consensus would directly contravene the National Islands Plan's commitment to community empowerment. The National Islands Plan, page 65, para. 5 'Our vision is for islanders to be empowered to shape their own priorities, build their futures, and protect what makes their communities unique.' Significant Adverse Impacts on Marine Mammals and Protected Marine Habitats: The Outer Hebrides are described by the Scottish Government's own scientists as "probably the richest area of the UK for marine mammals with around 20 species of cetacean recorded in the region over the last 30 years" (Scottish Marine and Freshwater Science Vol. 5 No. 9). The site lies adjacent to the Inner Hebrides and Minches SAC - the largest harbour porpoise SAC in Europe - within the wider range of the North-east Lewis MPA for Risso's dolphin, within documented fin and sperm whale migration corridors (Blue Corridors initiative), and within the wider feeding and habitat range of minke, humpback and sei whales, and within the foraging range of the Monach Isles grey seal colony (the largest in Europe). The EIAR fails to reflect this internationally significant baseline in its significance conclusions and cannot demonstrate, to the legal standard required, that adverse effects on these protected sites and species will be avoided. Under the Habitats Regulations Appraisal process, consent must be refused unless Scottish Ministers are satisfied beyond reasonable scientific doubt that the integrity of European sites will not be adversely affected (NatureScot HRA guidance). That standard has not been met. Construction noise: The developer's own noise modelling (EIAR Appendix 19.2) provides for up to 5.5 hours of percussive piling per day, up to 10,635 strikes per pile per day, hammer energies up to 5,000 kJ, and 1,563 pin piles across two consecutive construction years (April–October). The EIAR itself acknowledges that "harbour porpoises are widely regarded as the most sensitive marine mammal receptor to underwater noise" and that behavioural disturbance can occur up to 70 km from piling (Bailey et al., 2010, cited in Chapter 13). The proposed piling window coincides with peak cetacean seasonal density and with harbour seal pupping (June–July), triggering the prohibition on deliberate disturbance of European Protected Species during breeding and rearing periods under the Conservation of Habitats and Species Regulations 2017 and Section 9 of the Wildlife and Countryside Act 1981. The developer's own underwater noise modelling (EIAR Appendix 13.3) confirms that, even with noise mitigation applied, percussive piling at the northernmost foundation location generates a PTS (permanent auditory injury) range of up to 1,500 m for low-frequency cetaceans and a TTS (temporary auditory injury) range of up to 49 km. These are the developer's own figures, after mitigation. Low-frequency cetaceans include minke, fin, sei and humpback whales - all species documented in these waters. A 49 km auditory

injury zone, repeated across an April–October piling window for two consecutive years, cannot credibly be reconciled with a classification of effects as "not significant." NMP Policy GEN 13: development should avoid significant adverse effects of man-made noise and vibration on species sensitive to such effects. The EIAR predicts disturbance to 9.186% of the Risso's dolphin management unit population and 27.7% of the coastal bottlenose dolphin population from piling noise, yet classifies these effects as "not significant." GEN 13 sets an avoidance standard, not a tolerance threshold. The developer's own EPS and Basking Shark Risk Assessment (submitted to Marine Scotland, 22 February 2023) formally acknowledges risk of disturbance to minke whale, harbour porpoise, common dolphin, bottlenose dolphin, grey seal and basking shark from survey work alone. Full construction at this scale cannot credibly be claimed to present a lesser risk. The 2023 Tolsta Stranding: In July 2023, 54 of 55 long-finned pilot whales died on Traigh Mhòr beach while geophysical surveys were being carried out at this lease area. The Scottish Government investigation could not rule out anthropogenic contribution and explicitly acknowledged limitations in the acoustic detection capability of the recorders used. This recent and devastating event must weigh heavily in this decision. Priority Marine Features and seabed disturbance: Kelp beds - confirmed present across 10 km² within the Study Area and designated as a PMF and blue carbon habitat - are assessed as sustaining "minor adverse" impact, with no compensatory measures proposed. Maerl beds, horse mussel beds, fan mussel aggregations and cold-water coral reefs (all Scottish PMFs) are either excluded on the basis of decade-old desktop data (Tyler-Walters et al., 2016) or not mentioned at all. The developer concedes that its primary mitigation - micro-siting of turbines and cables - "cannot be quantified until detailed design and further site-specific investigations are complete." NMP GEN 5: safeguard natural carbon sinks including kelp beds. NMP GEN 9: do not result in significant impact on the national status of Priority Marine Features, and protect and enhance the health of the marine area. Cumulative and in-combination effects: The Habitats Regulations require assessment of cumulative effects with other plans and projects. The Scottish Government's own 2026 ICIA Screening Report concedes that Scottish offshore wind plans are "likely...to undergo the derogations process under the Habitats Regulations." Spiorad na Mara is one of several large developments proposed in or adjacent to these waters; the cumulative assessment does not rigorously meet this requirement. NMP GEN 21 requires cumulative impacts affecting the ecosystem to be addressed. Inadequate assessment and deferred mitigation: The joint representation from the Hebridean Whale and Dolphin Trust and Whale and Dolphin Conservation states that baseline cetacean data is "severely lacking." Proposed mitigation (MMOs, PAM, soft-start) is designed to address acute physical injury, not behavioural displacement; JNCC guidance confirms PAM has "limited range" for harbour porpoise and is "not suitable" for seals and baleen whales. Key mitigation is deferred to a post-consent Marine Mammal Mitigation Protocol, preventing Scottish Ministers from assessing adequacy at the point of determination - contrary to the beyond-reasonable-scientific-doubt standard required under the Habitats Regulations. Peer-reviewed monitoring at Scottish offshore wind farm construction sites (Benhemma-Le Gall et al. 2021, *Frontiers in Marine Science*) observed harbour porpoise displacement up to 12 km from pile-driving and 4 km from construction vessels alone - distances that no MMO, PAM or soft-start zone can address. The EPS licence contradiction: The EIAR identifies that activities may require an EPS licence due to disturbance at a level requiring legal derogation, while simultaneously concluding residual effects are "negligible or minor." Under the Conservation of Habitats and Species Regulations 2017, an EPS licence can only be granted where no satisfactory alternative exists, imperative reasons of overriding public interest apply, and favourable conservation status is maintained. The EIAR demonstrates none of these. Basking sharks (IUCN Endangered) were recorded by the developer's own July 2023 aerial survey (EIAR Appendix 13.1). The EIAR does not adequately assess EMF impacts from subsea cables on elasmobranchs, despite Scottish Government ScotMER research identifying this as an unresolved evidence gap (FF.07). No alternative solutions: Under the Habitats

Regulations, consent cannot be granted if alternative solutions exist. Other ScotWind sites are available in waters without the same density of European Protected Species and designated habitats, and the existence of those alternatives is directly relevant to whether consent for this site can lawfully proceed. Consent would therefore breach or inadequately address the Conservation (Natural Habitats &c.) Regulations 1994, the Conservation of Habitats and Species Regulations 2017, the Marine (Scotland) Act 2010, Section 9 of the Wildlife and Countryside Act 1981, NMP Policies GEN 5, GEN 9, GEN 13 and GEN 21, and ASCOBANS Resolution 7.6 (2016) on underwater noise. My further objection points: There is no understanding of the implications to community and wildlife if this goes ahead. This planning decision is about the long-term future and the character of a landscape and community that cannot be replaced once altered at this scale. Spiorad na Mara Offshore Wind Farm would cause significant, cumulative and largely irreversible harm to landscape and seascape character, heritage setting, and the tourism economy. I respectfully request that this application is rejected. Yours sincerely, [REDACTED]

i am objecting formally to the OffShore planning application .

[REDACTED]

Object to Spiorad na Mara offshore wind farm application

This will cause huge environmental impact on

Fishing seabirds also marine life like Whales .

There has been not enough community consultation

Also a dreadful impact on Tourism.

Difficulties to health definitely the public's audio due to noise levels that this will create.

Also the visual impact is not welcomed .

This planning decision is about the long term future and the character of a landscape and community that cannot be replaced once altered at this scale. Spiorad na Mara offshore windfarm would have countless negative effects. It would cause significant, cumulative and largely irreversible harm to the landscape and the seascape l character, heritage setting and the tourism industry and economy. Many of us go for walks along the local shores/beaches to help with stress, sadly this will become less helpful and calming if there are countless windturbines affecting the view and the sound. It is not fair that we islanders (and tourists coming for the beautiful views we have!) will have to sacrifice our outstanding landscape for this. Tourists come up here to the island for the views, what will happen if this is ruined for them? How will local shops cope with a potential loss of tourism? We are not willing to lose our beautiful views, the calming sound of the sea and our heritage to the look and sound of wind turbines. This is not fair. I request that the application for the turbines is rejected so we can continue to enjoy and benefit from our beautiful island.

I formally object to the above application as it contravenes the following planning policies and guidance:

Lack of Community Engagement: There was no consultation with the communities of west Lewis before Crown Estate Scotland identified and leased the N4 area for development. The plan was imposed on them without consent.

Scotland's National Marine Plan (NMP) GEN 18 'Early and effective engagement should be undertaken with the general public and all interested stakeholders to facilitate planning and consenting processes.'

NMP Para. 4.77 'Engagement with the public and other stakeholders should be appropriate, proportionate and meaningful. It should be undertaken as early as possible in planning and consenting processes,'

NPF4 Spatial Principles - Just Transition. 'We will empower people to shape their places.'

Lack of understanding of Cultural Significance: The EIAR makes no reference to the personal, cultural or historical attachment of the population of Lewis to their landscape and heritage, and fails to assess impacts on the living intangible heritage of the Gaelic community. Until a full assessment addressing impacts on Gaelic language and culture, community wellbeing, and west Lewis communities' relationship with their coastline is completed and publicly consulted upon, this application cannot lawfully be determined.

NMP Para. 4.20 'The historic environment includes all aspects of the environment resulting from the interaction between people and places through time,'

NPF4 Policy 7 a 'Development proposals with a potentially significant impact on historic assets or places will be accompanied by an assessment which is based on an understanding of the cultural significance of the historic asset and/or place.'

Significant Adverse Impacts on Protected Birdlife and Habitats: The development occupies primary foraging grounds for the Lewis Peatlands SPA red-throated divers, falls within the foraging range of the St Kilda gannet colony, and crosses a principal UK migratory corridor for protected species, including whooper swan and pink-footed goose. The EIAR fails to adequately assess the threats of collision, displacement, and barrier effects to these declining populations. Thus, consent would breach the Conservation (Natural Habitats &c.) Regulations 1994, the 2018 Offshore Regulations, the Marine (Scotland) Act 2010, and the Wildlife and Countryside Act 1981, as the proposal is likely to adversely affect the integrity of the following SPA's: Lewis Peatlands, West Coast of the Outer Hebrides, Seas off St Kilda and St Kilda.

NPF4 Policy 7 1 'Development proposals affecting a World Heritage Site or its setting will only be supported where their Outstanding Universal Value is protected and preserved.'

NPF4 Policy 11 e ix Impact on 'biodiversity including impacts on birds' must be addressed.

Failure to Protect the Integrity and Setting of Scheduled Monuments: The EIAR anticipates significant adverse effects on coastal heritage. It fails to assess the impact on key scheduled monuments such as SM13786. The proposal would harm the Calanais monuments and wider historic landscape by introducing an industrial horizon into their natural surroundings, fundamentally undermining the meaning, experience, and interconnected setting of these sites, directly conflicting with NPF4 Policy 7. There are many alternative sites for offshore wind development and no reasons of over-riding public

interest for choosing this site.

NMP Para. 4.22 'Marine planning should help to ensure that future marine activities and developments can be carried out in a way that respects the marine historic environment and the setting of important coastal heritage assets.' Para. 4.23 'Designated assets should be protected in situ within an appropriate setting'.

NPF4 Policy 7 h 'Development proposals affecting scheduled monuments will only be supported where:' ii 'significant adverse impacts on the integrity of the setting of a scheduled monument are avoided; or iii exceptional circumstances have been demonstrated to justify the impact on a scheduled monument and its setting and impacts on the monument or its setting have been minimised.'

Unassessed Onshore Impacts and Breach of Statutory Rights of Crofters: Granting offshore consent while onshore impacts on irreplaceable machair and deep peatland remain unassessed, directly contravenes NPF4 Policy 3, which requires biodiversity (including irreplaceable habitats) to be left in a demonstrably better state. In addition the proposal fails to engage the statutory rights of crofters under the Crofters (Scotland) Act 1993.

NMP Para. 4.77 'There should be a presumption in favour of publicising applications for marine and terrestrial components of a development together during consenting processes.'

Irreparable Harm to the Tourism Economy and Coastal Character: The Spiorad na Mara wind farm would permanently industrialise the unspoiled coastal scenery and dark skies on the Isle of Lewis, destroying the very qualities that attract visitors to the island. Local residents have consistently warned during consultation that this visual impact would decimate the tourist industry on which so many islanders depend. Tourism is built on the area's landscape, seascape, heritage, nature, and dark skies. This development risks long-term damage to local businesses and the wider economy, contrary to NPF4 Policy 30.

NMP, Para. 12.28 'An unspoiled environment, high quality landscape and a sense of closeness to nature are important to many people. Scenery and environmental quality are key factors in attracting visitors to Scotland's coasts,'

Community Opposition and lack of Community Empowerment: The Community Opinion Survey on the Spiorad na Mara Offshore Wind Farm Development (N4) published by www.emg-lewis.co.uk in April 2026 found that 88% of residents from Ness to Uig opposed the N4 development. Approving this project against such overwhelming local consensus would directly contravene the National Islands Plan's commitment to community empowerment.

The National Islands Plan, page 65, para. 5 'Our vision is for islanders to be empowered to shape their own priorities, build their futures, and protect what makes their communities unique.'

Significant Adverse Impacts on Marine Mammals and Protected Marine Habitats: The Outer Hebrides are described by the Scottish Government's own scientists as "probably the richest area of the UK for marine mammals with around 20 species of cetacean recorded in the region over the last 30 years" (Scottish Marine and Freshwater Science Vol. 5 No. 9). The site lies adjacent to the Inner Hebrides and Minches SAC - the largest harbour porpoise SAC in Europe - within the wider range of the North-east Lewis MPA for Risso's dolphin, within documented fin and sperm whale migration corridors (Blue Corridors initiative), and within the wider feeding and habitat range of minke, humpback and sei whales, and within the foraging range of the Monach Isles grey seal colony (the largest in Europe). The EIAR fails to reflect this internationally significant baseline in its significance conclusions and cannot demonstrate, to the legal standard required, that adverse effects on these protected sites and species will be avoided. Under the Habitats Regulations Appraisal process, consent must be refused unless Scottish Ministers are satisfied beyond reasonable scientific doubt that the integrity of European sites will not be adversely affected (NatureScot HRA guidance). That standard has not been met.

Construction noise: The developer's own noise modelling (EIAR Appendix 19.2) provides for up to 5.5 hours of percussive piling per day, up to 10,635 strikes per pile per day, hammer energies up to 5,000 kJ, and 1,563 pin piles across two consecutive construction years (April–October). The EIAR itself acknowledges that "harbour porpoises are widely regarded as the most sensitive marine mammal receptor to underwater noise" and that behavioural disturbance can occur up to 70 km from piling (Bailey et al., 2010, cited in Chapter 13). The proposed piling window coincides with peak cetacean seasonal density and with harbour seal pupping (June–July), triggering the prohibition on deliberate disturbance of European Protected Species during breeding and rearing periods under the Conservation of Habitats and Species Regulations 2017 and Section 9 of the Wildlife and Countryside Act 1981.

The developer's own underwater noise modelling (EIAR Appendix 13.3) confirms that, even with noise mitigation applied, percussive piling at the northernmost foundation location generates a PTS (permanent auditory injury) range of up to 1,500 m for low-frequency cetaceans and a TTS (temporary auditory injury) range of up to 49 km. These are the developer's own figures, after mitigation. Low-frequency cetaceans include minke, fin, sei and humpback whales - all species documented in these waters. A 49 km auditory injury zone, repeated across an April–October piling window for two consecutive years, cannot credibly be reconciled with a classification of effects as "not significant."

NMP Policy GEN 13: development should avoid significant adverse effects of man-made noise and vibration on species sensitive to such effects. The EIAR predicts disturbance to 9.186% of the Risso's dolphin management unit population and 27.7% of the coastal bottlenose dolphin population from piling noise, yet classifies these effects as "not significant." GEN 13 sets an avoidance standard, not a tolerance threshold.

The developer's own EPS and Basking Shark Risk Assessment (submitted to Marine Scotland, 22 February 2023) formally acknowledges risk of disturbance to minke whale, harbour porpoise, common dolphin, bottlenose dolphin, grey seal and basking shark from survey work alone. Full construction at this scale cannot credibly be claimed to present a lesser risk.

The 2023 Tolsta Stranding: In July 2023, 54 of 55 long-finned pilot whales died on Traigh Mhòr beach while geophysical surveys were being carried out at this lease area. The Scottish Government investigation could not rule out anthropogenic contribution and explicitly acknowledged limitations in the acoustic detection capability of the recorders used. This recent and devastating event must weigh heavily in this decision.

Priority Marine Features and seabed disturbance: Kelp beds - confirmed present across 10 km² within the Study Area and designated as a PMF and blue carbon habitat - are assessed as sustaining "minor adverse" impact, with no compensatory measures proposed. Maerl beds, horse mussel beds, fan mussel aggregations and cold-water coral reefs (all Scottish PMFs) are either excluded on the basis of decade-old desktop data (Tyler-Walters et al., 2016) or not mentioned at all. The developer concedes that its primary mitigation - micro-siting of turbines and cables - "cannot be quantified until detailed design and further site-specific investigations are complete."

NMP GEN 5: safeguard natural carbon sinks including kelp beds. NMP GEN 9: do not result in significant impact on the national status of Priority Marine Features, and protect and enhance the health of the marine area.

Cumulative and in-combination effects: The Habitats Regulations require assessment of cumulative effects with other plans and projects. The Scottish Government's own 2026 ICIA Screening Report concedes that Scottish offshore wind plans are "likely...to undergo

the derogations process under the Habitats Regulations." Spiorad na Mara is one of several large developments proposed in or adjacent to these waters; the cumulative assessment does not rigorously meet this requirement. NMP GEN 21 requires cumulative impacts affecting the ecosystem to be addressed.

Inadequate assessment and deferred mitigation: The joint representation from the Hebridean Whale and Dolphin Trust and Whale and Dolphin Conservation states that baseline cetacean data is "severely lacking." Proposed mitigation (MMOs, PAM, soft-start) is designed to address acute physical injury, not behavioural displacement; JNCC guidance confirms PAM has "limited range" for harbour porpoise and is "not suitable" for seals and baleen whales. Key mitigation is deferred to a post-consent Marine Mammal Mitigation Protocol, preventing Scottish Ministers from assessing adequacy at the point of determination - contrary to the beyond-reasonable-scientific-doubt standard required under the Habitats Regulations. Peer-reviewed monitoring at Scottish offshore wind farm construction sites (Benhemma-Le Gall et al. 2021, *Frontiers in Marine Science*) observed harbour porpoise displacement up to 12 km from pile-driving and 4 km from construction vessels alone - distances that no MMO, PAM or soft-start zone can address.

The EPS licence contradiction: The EIAR identifies that activities may require an EPS licence due to disturbance at a level requiring legal derogation, while simultaneously concluding residual effects are "negligible or minor." Under the Conservation of Habitats and Species Regulations 2017, an EPS licence can only be granted where no satisfactory alternative exists, imperative reasons of overriding public interest apply, and favourable conservation status is maintained. The EIAR demonstrates none of these. Basking sharks (IUCN Endangered) were recorded by the developer's own July 2023 aerial survey (EIAR Appendix 13.1). The EIAR does not adequately assess EMF impacts from subsea cables on elasmobranchs, despite Scottish Government ScotMER research identifying this as an unresolved evidence gap (FF.07).

No alternative solutions: Under the Habitats Regulations, consent cannot be granted if alternative solutions exist. Other ScotWind sites are available in waters without the same density of European Protected Species and designated habitats, and the existence of those alternatives is directly relevant to whether consent for this site can lawfully proceed. Consent would therefore breach or inadequately address the Conservation (Natural Habitats &c.) Regulations 1994, the Conservation of Habitats and Species Regulations 2017, the Marine (Scotland) Act 2010, Section 9 of the Wildlife and Countryside Act 1981, NMP Policies GEN 5, GEN 9, GEN 13 and GEN 21, and ASCOBANS Resolution 7.6 (2016) on underwater noise.

My further objection points:

This planning decision is about the long-term future and the character of a landscape and community that cannot be replaced once altered at this scale. Spiorad na Mara Offshore Wind Farm would cause significant, cumulative and largely irreversible harm to landscape and seascape character, heritage setting, and the tourism economy. I respectfully request that this application is rejected.

Yours sincerely,

I formally object to the above application as it contravenes the following planning policies and guidance:

Lack of Community Engagement: There was no consultation with the communities of west Lewis before Crown Estate Scotland identified and leased the N4 area for development. The plan was imposed on them without consent.

Scotland's National Marine Plan (NMP) GEN 18 'Early and effective engagement should be undertaken with the general public and all interested stakeholders to facilitate planning and consenting processes.'

NMP Para. 4.77 'Engagement with the public and other stakeholders should be appropriate, proportionate and meaningful. It should be undertaken as early as possible in planning and consenting processes.'

NPF4 Spatial Principles - Just Transition. 'We will empower people to shape their places.'

Lack of understanding of Cultural Significance: The EIAR makes no reference to the personal, cultural or historical attachment of the population of Lewis to their landscape and heritage, and fails to assess impacts on the living intangible heritage of the Gaelic community. Until a full assessment addressing impacts on Gaelic language and culture, community wellbeing, and west Lewis communities' relationship with their coastline is completed and publicly consulted upon, this application cannot lawfully be determined.

NMP Para. 4.20 'The historic environment includes all aspects of the environment resulting from the interaction between people and places through time.'

NPF4 Policy 7 a 'Development proposals with a potentially significant impact on historic assets or places will be accompanied by an assessment which is based on an understanding of the cultural significance of the historic asset and/or place.'

Significant Adverse Impacts on Protected Birdlife and Habitats: The development occupies primary foraging grounds for the Lewis Peatlands SPA red-throated divers, falls within the foraging range of the St Kilda gannet colony, and crosses a principal UK migratory corridor for protected species, including whooper swan and pink-footed goose. The EIAR fails to adequately assess the threats of collision, displacement, and barrier effects to these declining populations. Thus, consent would breach the Conservation (Natural Habitats &c.) Regulations 1994, the 2018 Offshore Regulations, the Marine (Scotland) Act 2010, and the Wildlife and Countryside Act 1981, as the proposal is likely to adversely affect the integrity of the following SPA's: Lewis Peatlands, West Coast of the Outer Hebrides, Seas off St Kilda and St Kilda.

NPF4 Policy 7 l 'Development proposals affecting a World Heritage Site or its setting will only be supported where their Outstanding Universal Value is protected and preserved.'

NPF4 Policy 11 e ix Impact on 'biodiversity including impacts on birds' must be addressed.

Failure to Protect the Integrity and Setting of Scheduled Monuments: The EIAR anticipates significant adverse effects on coastal heritage. It fails to assess the impact on key scheduled monuments such as SM13786. The proposal would harm the Calanais monuments and wider historic landscape by introducing an industrial horizon into their natural surroundings, fundamentally undermining the meaning, experience, and interconnected setting of these sites, directly conflicting with NPF4 Policy 7. There are many alternative sites for offshore wind development and no reasons of over-riding public interest for choosing this site.

NMP Para. 4.22 'Marine planning should help to ensure that future marine activities and developments can be carried out in a way that respects the marine historic environment and the setting of important coastal heritage assets.' Para. 4.23 'Designated assets should be protected in situ within an appropriate setting'.

NPF4 Policy 7 h 'Development proposals affecting scheduled monuments will only be supported where: ii 'significant adverse impacts on the integrity of the setting of a scheduled monument are avoided; or iii exceptional circumstances have been demonstrated to justify the impact on a scheduled monument and its setting and impacts on the monument or its setting have been minimised.'

Unassessed Onshore Impacts and Breach of Statutory Rights of Crofters: Granting offshore consent while onshore impacts on irreplaceable machair and deep peatland remain unassessed, directly contravenes NPF4 Policy 3, which requires biodiversity (including irreplaceable habitats) to be left in a demonstrably better state. In addition the proposal fails to engage the statutory rights of crofters under the Crofters (Scotland) Act 1993. NMP Para. 4.77 'There should be a presumption in favour of publicising applications for marine and terrestrial components of a development together during consenting processes.'

Irreparable Harm to the Tourism Economy and Coastal Character: The Spiorad na Mara wind farm would permanently industrialise the unspoiled coastal scenery and dark skies on the Isle of Lewis, destroying the very qualities that attract visitors to the island. Local residents have consistently warned during consultation that this visual impact would decimate the tourist industry on which so many islanders depend. Tourism is built on the area's landscape, seascape, heritage, nature, and dark skies. This development risks long-term damage to local businesses and the wider economy, contrary to NPF4 Policy 30.

NMP, Para. 12.28 'An unspoiled environment, high quality landscape and a sense of closeness to nature are important to many people. Scenery and environmental quality are key factors in attracting visitors to Scotland's coasts.'

Community Opposition and lack of Community Empowerment: The Community Opinion Survey on the Spiorad na Mara Offshore Wind Farm Development (N4) published by www.emg-lewis.co.uk in April 2026 found that 88% of residents from Ness to Uig opposed the N4 development. Approving this project against such overwhelming local consensus would directly contravene the National Islands Plan's commitment to community empowerment.

The National Islands Plan, page 65, para. 5 'Our vision is for islanders to be empowered to shape their own priorities, build their futures, and protect what makes their communities unique.'

Significant Adverse Impacts on Marine Mammals and Protected Marine Habitats: The Outer Hebrides are described by the Scottish Government's own scientists as "probably the richest area of the UK for marine mammals with around 20 species of cetacean recorded in the region over the last 30 years" (Scottish Marine and Freshwater Science Vol. 5 No. 9). The site lies adjacent to the Inner Hebrides and Minches SAC - the largest harbour porpoise SAC in Europe - within the wider range of the North-east Lewis MPA for Risso's dolphin, within documented fin and sperm whale migration corridors (Blue Corridors initiative), and within the wider feeding and habitat range of minke, humpback and sei whales, and within the foraging range of the Monach Isles grey seal colony (the largest in Europe). The EIAR fails to reflect this internationally significant baseline in its significance conclusions and cannot demonstrate, to the legal standard required, that adverse effects on these protected sites and species will be avoided. Under the Habitats Regulations Appraisal process, consent must be refused unless Scottish Ministers are satisfied beyond reasonable scientific doubt that the integrity of European sites will not be adversely affected (NatureScot HRA guidance). That standard has not been met.

Construction noise: The developer's own noise modelling (EIAR Appendix 19.2) provides for up to 5.5 hours of percussive piling per day, up to 10,635 strikes per pile per day, hammer energies up to 5,000 kJ, and 1,563 pin piles across two consecutive construction years (April–October). The EIAR itself acknowledges that "harbour porpoises are widely regarded as the most sensitive marine mammal receptor to underwater noise" and that behavioural disturbance can occur up to 70 km from piling (Bailey et al., 2010, cited in Chapter 13). The proposed piling window coincides with peak cetacean seasonal density and with harbour seal pupping (June–July), triggering the prohibition on deliberate disturbance of European Protected Species during breeding and rearing periods under the Conservation of Habitats and Species Regulations 2017 and Section 9 of the Wildlife and Countryside Act 1981.

The developer's own underwater noise modelling (EIAR Appendix 13.3) confirms that, even with noise mitigation applied, percussive piling at the northernmost foundation location generates a PTS (permanent auditory injury) range of up to 1,500 m for low-frequency cetaceans and a TTS (temporary auditory injury) range of up to 49 km. These are the developer's own figures, after mitigation. Low-frequency cetaceans include minke, fin, sei and humpback whales - all species documented in these waters. A 49 km auditory injury zone, repeated across an April–October piling window for two consecutive years, cannot credibly be reconciled with a classification of effects as "not significant."

NMP Policy GEN 13: development should avoid significant adverse effects of man-made noise and vibration on species sensitive to such effects. The EIAR predicts disturbance to 9.186% of the Risso's dolphin management unit population and 27.7% of the coastal bottlenose dolphin population from piling noise, yet classifies these effects as "not significant." GEN 13 sets an avoidance standard, not a tolerance threshold. The developer's own EPS and Basking Shark Risk Assessment (submitted to Marine Scotland, 22 February 2023) formally acknowledges risk of disturbance to minke whale, harbour porpoise, common dolphin, bottlenose dolphin, grey seal and basking shark from survey work alone. Full construction at this scale cannot credibly be claimed to present a lesser risk.

The 2023 Tolsta Stranding: In July 2023, 54 of 55 long-finned pilot whales died on Traigh Mhòr beach while geophysical surveys were being carried out at this lease area. The Scottish Government investigation could not rule out anthropogenic contribution and explicitly acknowledged limitations in the acoustic detection capability

of the recorders used. This recent and devastating event must weigh heavily in this decision.

Priority Marine Features and seabed disturbance: Kelp beds - confirmed present across 10 km² within the Study Area and designated as a PMF and blue carbon habitat - are assessed as sustaining "minor adverse" impact, with no compensatory measures proposed. Maerl beds, horse mussel beds, fan mussel aggregations and cold-water coral reefs (all Scottish PMFs) are either excluded on the basis of decade-old desktop data (Tyler-Walters et al., 2016) or not mentioned at all. The developer concedes that its primary mitigation - micro-siting of turbines and cables - "cannot be quantified until detailed design and further site-specific investigations are complete."

NMP GEN 5: safeguard natural carbon sinks including kelp beds. NMP GEN 9: do not result in significant impact on the national status of Priority Marine Features, and protect and enhance the health of the marine area.

Cumulative and in-combination effects: The Habitats Regulations require assessment of cumulative effects with other plans and projects. The Scottish Government's own 2026 ICIA Screening Report concedes that Scottish offshore wind plans are "likely...to undergo the derogations process under the Habitats Regulations." Spiorad na Mara is one of several large developments proposed in or adjacent to these waters; the cumulative assessment does not rigorously meet this requirement. NMP GEN 21 requires cumulative impacts affecting the ecosystem to be addressed.

Inadequate assessment and deferred mitigation: The joint representation from the Hebridean Whale and Dolphin Trust and Whale and Dolphin Conservation states that baseline cetacean data is "severely lacking." Proposed mitigation (MMOs, PAM, soft-start) is designed to address acute physical injury, not behavioural displacement; JNCC guidance confirms PAM has "limited range" for harbour porpoise and is "not suitable" for seals and baleen whales. Key mitigation is deferred to a post-consent Marine Mammal Mitigation Protocol, preventing Scottish Ministers from assessing adequacy at the point of determination - contrary to the beyond-reasonable-scientific-doubt standard required under the Habitats Regulations. Peer-reviewed monitoring at Scottish offshore wind farm construction sites (Benhemma-Le Gall et al. 2021, *Frontiers in Marine Science*) observed harbour porpoise displacement up to 12 km from pile-driving and 4 km from construction vessels alone - distances that no MMO, PAM or soft-start zone can address.

The EPS licence contradiction: The EIAR identifies that activities may require an EPS licence due to disturbance at a level requiring legal derogation, while simultaneously concluding residual effects are "negligible or minor." Under the Conservation of Habitats and Species Regulations 2017, an EPS licence can only be granted where no satisfactory alternative exists, imperative reasons of overriding public interest apply, and favourable conservation status is maintained. The EIAR demonstrates none of these.

Basking sharks (IUCN Endangered) were recorded by the developer's own July 2023 aerial survey (EIAR Appendix 13.1). The EIAR does not adequately assess EMF impacts from subsea cables on elasmobranchs, despite Scottish Government ScotMER research identifying this as an unresolved evidence gap (FF.07).

No alternative solutions: Under the Habitats Regulations, consent cannot be granted if alternative solutions exist. Other ScotWind sites are available in waters without the same density of European Protected Species and designated habitats, and the existence of those alternatives is directly relevant to whether consent for this site can lawfully proceed.

Consent would therefore breach or inadequately address the Conservation (Natural Habitats &c.) Regulations 1994, the Conservation of Habitats and Species Regulations 2017, the Marine (Scotland) Act 2010, Section 9 of the Wildlife and Countryside Act 1981, NMP Policies GEN 5, GEN 9, GEN 13 and GEN 21, and ASCOBANS Resolution 7.6 (2016) on underwater noise.

My further objection points:

This planning decision is about the long-term future and the character of a landscape and community that cannot be replaced once altered at this scale. Spiorad na Mara Offshore Wind Farm would cause significant, cumulative and largely irreversible harm to landscape and seascape character, heritage setting, and the tourism economy.

I respectfully request that this application is rejected.

Dear Sir/ Madam,

I object to the above application.

While I am enthusiastic about renewable energy and I recognise the need for fuel security, I believe what is being proposed is disproportionate, both on account of its size and because of its likely impact on local residents, marine life, bird migration routes, the landscape, fishing, tourism, Hebridean language and culture.

Above all, I object to its imposition on communities which have not been consulted, nor offered a share in this project - either by way of a stake in the companies involved or in the profits they stand to gain.

Yours faithfully,

[REDACTED]

MD-00011742 & MD-00011743 - Spiorad na Mara Limited - Spiorad na Mara Offshore Wind Farm - Isle of Lewis

I formally object to the above application as it contravenes the following planning policies and guidance:

Lack of Community Engagement: There was no consultation with the communities of west Lewis before Crown Estate Scotland identified and leased the N4 area for development. The plan was imposed on them without consent. **Scotland's National Marine Plan (NMP) GEN 18** *'Early and effective engagement should be undertaken with the general public and all interested stakeholders to facilitate planning and consenting processes.'*

NMP Para. 4.77 *'Engagement with the public and other stakeholders should be appropriate, proportionate and meaningful. It should be undertaken as early as possible in planning and consenting processes,'*

NPF4 Spatial Principles - Just Transition. *'We will empower people to shape their places.'*

Lack of understanding of Cultural Significance: The EIAR makes no reference to the personal, cultural or historical attachment of the population of Lewis to their landscape and heritage, and fails to assess impacts on the living intangible heritage of the Gaelic community. Until a full assessment addressing impacts on Gaelic language and culture, community wellbeing, and west Lewis communities' relationship with their coastline is completed and publicly consulted upon, this application cannot lawfully be determined.

NMP Para. 4.20 *'The historic environment includes all aspects of the environment resulting from the interaction between people and places through time,'*

NPF4 Policy 7 a *'Development proposals with a potentially significant impact on historic assets or places will be accompanied by an assessment which is based on an understanding of the cultural significance of the historic asset and/or place.'*

Significant Adverse Impacts on Protected Birdlife and Habitats: The development occupies primary foraging grounds for the Lewis Peatlands SPA red-throated divers, falls within the foraging range of the St Kilda gannet colony, and crosses a principal UK migratory corridor for protected species, including whooper swan and pink-footed goose. The EIAR fails to adequately assess the threats of collision, displacement, and barrier effects to these declining populations. Thus, consent would breach the **Conservation (Natural Habitats &c.) Regulations 1994**, the **2018 Offshore Regulations**, the **Marine (Scotland) Act 2010**, and the **Wildlife and Countryside Act 1981**, as the proposal is likely to adversely affect the integrity of the following SPA's: Lewis Peatlands, West Coast of the Outer Hebrides, Seas off St Kilda and St Kilda.

NPF4 Policy 7 i *'Development proposals affecting a World Heritage Site or its setting will only be supported where their Outstanding Universal Value is protected and preserved.'*

NPF4 Policy 11 e ix Impact on *'biodiversity including impacts on birds'* must be addressed.

Failure to Protect the Integrity and Setting of Scheduled Monuments: The EIAR anticipates significant adverse effects on coastal heritage. It fails to assess the impact on key scheduled monuments such as SM13786. The proposal would harm the Calanais monuments and wider historic landscape by introducing an industrial horizon into their natural surroundings, fundamentally undermining the meaning, experience, and interconnected setting of these sites, directly conflicting with **NPF4 Policy 7**. There are many alternative sites for offshore wind development and no reasons of over-riding public interest for choosing this site.

NMP Para. 4.22 *'Marine planning should help to ensure that future marine activities and developments can be carried out in a way that respects the marine historic environment and the setting of important coastal heritage assets.'* **Para. 4.23** *'Designated assets should be protected in situ within an appropriate setting.'*

NPF4 Policy 7 h *'Development proposals affecting scheduled monuments will only be supported where:'* ii *'significant adverse impacts on the integrity of the setting of a scheduled monument are avoided; or* iii *exceptional circumstances have been demonstrated to justify the impact on a scheduled monument and its setting and impacts on the monument or its setting have been minimised.'*

Unassessed Onshore Impacts and Breach of Statutory Rights of Crofters: Granting offshore consent while onshore impacts on irreplaceable machair and deep peatland remain unassessed, directly contravenes **NPF4 Policy 3**, which

requires biodiversity (including irreplaceable habitats) to be left in a demonstrably better state. In addition the proposal fails to engage the statutory rights of crofters under the **Crofters (Scotland) Act 1993**.

NMP Para. 4.77 *'There should be a presumption in favour of publicising applications for marine and terrestrial components of a development together during consenting processes.'*

Irreparable Harm to the Tourism Economy and Coastal Character: The Spiorad na Mara wind farm would permanently industrialise the unspoiled coastal scenery and dark skies on the Isle of Lewis, destroying the very qualities that attract visitors to the island. Local residents have consistently warned during consultation that this visual impact would decimate the tourist industry on which so many islanders depend. Tourism is built on the area's landscape, seascape, heritage, nature, and dark skies. This development risks long-term damage to local businesses and the wider economy, contrary to **NPF4 Policy 30**.

NMP, Para. 12.28 *'An unspoiled environment, high quality landscape and a sense of closeness to nature are important to many people. Scenery and environmental quality are key factors in attracting visitors to Scotland's coasts,'*

Community Opposition and lack of Community Empowerment: The Community Opinion Survey on the Spiorad na Mara Offshore Wind Farm Development (N4) published by www.emg-lewis.co.uk in April 2026 found that 88% of residents from Ness to Uig opposed the N4 development. Approving this project against such overwhelming local consensus would directly contravene the National Islands Plan's commitment to community empowerment.

The National Islands Plan, page 65, para. 5 *'Our vision is for islanders to be empowered to shape their own priorities, build their futures, and protect what makes their communities unique.'*

My further objection points:

This planning decision is about the long-term future and the character of a landscape and community that cannot be replaced once altered at this scale. Spiorad na Mara Offshore Wind Farm would cause significant, cumulative and largely irreversible harm to landscape and seascape character, heritage setting, and the tourism economy.

I respectfully request that this application is rejected.

Yours sincerely,

I would like to formally register my objection to this application as it contravenes the attached planning policies and guidance.

Please Email to MD.MarineRenewables@gov.scot By 7th May 2026

Or Post to: Marine Directorate, Licensing Operations Team, Scottish Gov, 375 Victoria Road, Aberdeen, AB11 9DB

My address: _____.

Postcode: _____ Email: _____ Date: 1.5.25

MD-00011742 & MD-00011743 - Spiorad na Mara Limited - Spiorad na Mara Offshore Wind Farm - Isle of Lewis

I formally object to the above application as it contravenes the following planning policies and guidance:

Lack of Community Engagement: There was no consultation with the communities of west Lewis before Crown Estate Scotland identified and leased the N4 area for development. The plan was imposed on them without consent. **Scotland's National Marine Plan (NMP) GEN 18** *'Early and effective engagement should be undertaken with the general public and all interested stakeholders to facilitate planning and consenting processes.'*

NMP Para. 4.77 *'Engagement with the public and other stakeholders should be appropriate, proportionate and meaningful. It should be undertaken as early as possible in planning and consenting processes,'*

NPF4 Spatial Principles - Just Transition. *'We will empower people to shape their places.'*

Lack of understanding of Cultural Significance: The EIAR makes no reference to the personal, cultural or historical attachment of the population of Lewis to their landscape and heritage, and fails to assess impacts on the living intangible heritage of the Gaelic community. Until a full assessment addressing impacts on Gaelic language and culture, community wellbeing, and west Lewis communities' relationship with their coastline is completed and publicly consulted upon, this application cannot lawfully be determined.

NMP Para. 4.20 *'The historic environment includes all aspects of the environment resulting from the interaction between people and places through time,'*

NPF4 Policy 7 a *'Development proposals with a potentially significant impact on historic assets or places will be accompanied by an assessment which is based on an understanding of the cultural significance of the historic asset and/or place.'*

Significant Adverse Impacts on Protected Birdlife and Habitats: This is by far my largest concern. The development occupies primary foraging grounds for the Lewis Peatlands SPA red-throated divers, falls within the foraging range of the St Kilda gannet colony, and crosses a principal UK migratory corridor for protected species, including whooper swan and pink-footed goose. The EIAR fails to adequately assess the threats of collision, displacement, and barrier effects to these declining populations. Thus, consent would breach the **Conservation (Natural Habitats &c.) Regulations 1994**, the **2018 Offshore Regulations**, the **Marine (Scotland) Act 2010**, and the **Wildlife and Countryside Act 1981**, as the proposal is likely to adversely affect the integrity of the following SPA's: Lewis Peatlands, West Coast of the Outer Hebrides, Seas off St Kilda and St Kilda.

NPF4 Policy 7 i *'Development proposals affecting a World Heritage Site or its setting will only be supported where their Outstanding Universal Value is protected and preserved.'*

NPF4 Policy 11 e ix Impact on 'biodiversity including impacts on birds' must be addressed.

Failure to Protect the Integrity and Setting of Scheduled Monuments: The EIAR anticipates significant adverse effects on coastal heritage. It fails to assess the impact on key scheduled monuments such as SM13786. The proposal would harm the Calanais monuments and wider historic landscape by introducing an industrial horizon into their natural surroundings, fundamentally undermining the meaning, experience, and interconnected setting of these sites, directly conflicting with **NPF4 Policy 7**. There are many alternative sites for offshore wind development and no reasons of over-riding public interest for choosing this site.

NMP Para. 4.22 *'Marine planning should help to ensure that future marine activities and developments can be carried out in a way that respects the marine historic environment and the setting of important coastal heritage assets.'* **Para. 4.23** *'Designated assets should be protected in situ within an appropriate setting'.*

NPF4 Policy 7 h *'Development proposals affecting scheduled monuments will only be supported where: ii 'significant adverse impacts on the integrity of the setting of a scheduled monument are avoided; or iii exceptional circumstances have been demonstrated to justify the impact on a scheduled monument and its setting and impacts on the monument or its setting have been minimised.'*

Unassessed Onshore Impacts and Breach of Statutory Rights of Crofters: Granting offshore consent while onshore impacts on irreplaceable machair and deep peatland remain unassessed, directly contravenes **NPF4 Policy 3**, which requires biodiversity (including irreplaceable habitats) to be left in a demonstrably better state. In addition the proposal fails to engage the statutory rights of crofters under the **Crofters (Scotland) Act 1993**.

NMP Para. 4.77 *'There should be a presumption in favour of publicising applications for marine and terrestrial components of a development together during consenting processes.'*

Irreparable Harm to the Tourism Economy and Coastal Character: The Spiorad na Mara wind farm would permanently industrialise the unspoiled coastal scenery and dark skies on the Isle of Lewis, destroying the very qualities that attract visitors to the island. Local residents have consistently warned during consultation that this visual impact would decimate the tourist industry on which so many islanders depend. Tourism is built on the area's landscape, seascape, heritage, nature, and dark skies. This development risks long-term damage to local businesses and the wider economy, contrary to **NPF4 Policy 30**.

NMP, Para. 12.28 *'An unspoiled environment, high quality landscape and a sense of closeness to nature are important to many people. Scenery and environmental quality are key factors in attracting visitors to Scotland's coasts,'*

Community Opposition and lack of Community Empowerment: The Community Opinion Survey on the Spiorad na Mara Offshore Wind Farm Development (N4) published by www.emg-lewis.co.uk in April 2026 found that 88% of residents from Ness to Uig opposed the N4 development. Approving this project against such overwhelming local consensus would directly contravene the National Islands Plan's commitment to community empowerment.

The National Islands Plan, page 65, para. 5 *'Our vision is for islanders to be empowered to shape their own priorities, build their futures, and protect what makes their communities unique.'*

My further objection points: The vibrations caused by these enormous machines will cause untold damage to the seabed and the wildlife in our waters. The noise will drive away marine mammals. This island is a haven for wildlife, and this is what attracts tourism. Without the beautiful scenery and tourism, this island will slowly die. Wind turbines should be placed far away from land, out in open water, where animals can move away. Moving in lots of people to build these machines will also affect this island, changing its cultures and ways beyond recognition.

This planning decision is about the long-term future and the character of a landscape and community that cannot be replaced once altered at this scale. Spiorad na Mara Offshore Wind Farm would cause significant, cumulative and largely irreversible harm to landscape and seascape character, heritage setting, and the tourism economy.

I respectfully request that this application is rejected.

Yours sincerely,

From: 
To: [MD Marine Renewables](#)
Subject: Objection - Spiorad na Mara Offshore Wind Farm (MD-00011742 & MD-00011743)
Date: 01 May 2026 12:35:15

I formally object to the above application as it contravenes the following planning policies and guidance:

Lack of Community Engagement: There was no consultation with the communities of west Lewis before Crown Estate Scotland identified and leased the N4 area for development.

The plan was imposed on them without consent.

Scotland's National Marine Plan (NMP) GEN 18 'Early and effective engagement should be undertaken with the general public and all interested stakeholders to facilitate planning and consenting processes.'

NMP Para. 4.77 'Engagement with the public and other stakeholders should be appropriate, proportionate and meaningful. It should be undertaken as early as possible in planning and consenting processes,'

NPF4 Spatial Principles - Just Transition. 'We will empower people to shape their places.'

Lack of understanding of Cultural Significance: The EIAR makes no reference to the personal, cultural or historical attachment of the population of Lewis to their landscape and heritage, and fails to assess impacts on the living intangible heritage of the Gaelic community. Until a full assessment addressing impacts on Gaelic language and culture, community wellbeing, and west Lewis communities' relationship with their coastline is completed and publicly consulted upon, this application cannot lawfully be determined.

NMP Para. 4.20 'The historic environment includes all aspects of the environment resulting from the interaction between people and places through time,'

NPF4 Policy 7 a 'Development proposals with a potentially significant impact on historic assets or places will be accompanied by an assessment which is based on an understanding of the cultural significance of the historic asset and/or place.'

Significant Adverse Impacts on Protected Birdlife and Habitats: The development occupies primary foraging grounds for the Lewis Peatlands SPA red-throated divers, falls within the foraging range of the St Kilda gannet colony, and crosses a principal UK migratory corridor for protected species, including whooper swan and pink-footed goose. The EIAR fails to adequately assess the threats of collision, displacement, and barrier effects to these declining populations. Thus, consent would breach the Conservation (Natural Habitats &c.) Regulations 1994, the 2018 Offshore Regulations, the Marine (Scotland) Act 2010, and the Wildlife and Countryside Act 1981, as the proposal is likely to adversely affect the integrity of the following SPA's: Lewis Peatlands, West Coast of the Outer Hebrides, Seas off St Kilda and St Kilda.

NPF4 Policy 7 1 'Development proposals affecting a World Heritage Site or its setting will only be supported where their Outstanding Universal Value is protected and preserved.'

NPF4 Policy 11 e ix Impact on 'biodiversity including impacts on birds' must be addressed.

Failure to Protect the Integrity and Setting of Scheduled Monuments: The EIAR anticipates significant adverse effects on coastal heritage. It fails to assess the impact on key scheduled monuments such as SM13786. The proposal would harm the Calanais monuments and wider historic landscape by introducing an industrial horizon into their natural surroundings, fundamentally undermining the meaning, experience, and interconnected setting of these sites, directly conflicting with NPF4 Policy 7. There are many alternative sites for offshore wind development and no reasons of over-riding public

interest for choosing this site.

NMP Para. 4.22 'Marine planning should help to ensure that future marine activities and developments can be carried out in a way that respects the marine historic environment and the setting of important coastal heritage assets.' Para. 4.23 'Designated assets should be protected in situ within an appropriate setting'.

NPF4 Policy 7 h 'Development proposals affecting scheduled monuments will only be supported where:' ii 'significant adverse impacts on the integrity of the setting of a scheduled monument are avoided; or iii exceptional circumstances have been demonstrated to justify the impact on a scheduled monument and its setting and impacts on the monument or its setting have been minimised.'

Unassessed Onshore Impacts and Breach of Statutory Rights of Crofters: Granting offshore consent while onshore impacts on irreplaceable machair and deep peatland remain unassessed, directly contravenes NPF4 Policy 3, which requires biodiversity (including irreplaceable habitats) to be left in a demonstrably better state. In addition the proposal fails to engage the statutory rights of crofters under the Crofters (Scotland) Act 1993.

NMP Para. 4.77 'There should be a presumption in favour of publicising applications for marine and terrestrial components of a development together during consenting processes.'

Irreparable Harm to the Tourism Economy and Coastal Character: The Spiorad na Mara wind farm would permanently industrialise the unspoiled coastal scenery and dark skies on the Isle of Lewis, destroying the very qualities that attract visitors to the island. Local residents have consistently warned during consultation that this visual impact would decimate the tourist industry on which so many islanders depend. Tourism is built on the area's landscape, seascape, heritage, nature, and dark skies. This development risks long-term damage to local businesses and the wider economy, contrary to NPF4 Policy 30.

NMP, Para. 12.28 'An unspoiled environment, high quality landscape and a sense of closeness to nature are important to many people. Scenery and environmental quality are key factors in attracting visitors to Scotland's coasts,'

Community Opposition and lack of Community Empowerment: The Community Opinion Survey on the Spiorad na Mara Offshore Wind Farm Development (N4) published by www.emg-lewis.co.uk in April 2026 found that 88% of residents from Ness to Uig opposed the N4 development. Approving this project against such overwhelming local consensus would directly contravene the National Islands Plan's commitment to community empowerment.

The National Islands Plan, page 65, para. 5 'Our vision is for islanders to be empowered to shape their own priorities, build their futures, and protect what makes their communities unique.'

Significant Adverse Impacts on Marine Mammals and Protected Marine Habitats: The Outer Hebrides are described by the Scottish Government's own scientists as "probably the richest area of the UK for marine mammals with around 20 species of cetacean recorded in the region over the last 30 years" (Scottish Marine and Freshwater Science Vol. 5 No. 9). The site lies adjacent to the Inner Hebrides and Minches SAC - the largest harbour porpoise SAC in Europe - within the wider range of the North-east Lewis MPA for Risso's dolphin, within documented fin and sperm whale migration corridors (Blue Corridors initiative), and within the wider feeding and habitat range of minke, humpback and sei whales, and within the foraging range of the Monach Isles grey seal colony (the largest in Europe). The EIAR fails to reflect this internationally significant baseline in its significance conclusions and cannot demonstrate, to the legal standard required, that adverse effects on these protected sites and species will be avoided. Under the Habitats Regulations Appraisal process, consent must be refused unless Scottish Ministers are satisfied beyond reasonable scientific doubt that the integrity of European sites will not be adversely affected (NatureScot HRA guidance). That standard has not been met.

Construction noise: The developer's own noise modelling (EIAR Appendix 19.2) provides for up to 5.5 hours of percussive piling per day, up to 10,635 strikes per pile per day, hammer energies up to 5,000 kJ, and 1,563 pin piles across two consecutive construction years (April–October). The EIAR itself acknowledges that "harbour porpoises are widely regarded as the most sensitive marine mammal receptor to underwater noise" and that behavioural disturbance can occur up to 70 km from piling (Bailey et al., 2010, cited in Chapter 13). The proposed piling window coincides with peak cetacean seasonal density and with harbour seal pupping (June–July), triggering the prohibition on deliberate disturbance of European Protected Species during breeding and rearing periods under the Conservation of Habitats and Species Regulations 2017 and Section 9 of the Wildlife and Countryside Act 1981.

The developer's own underwater noise modelling (EIAR Appendix 13.3) confirms that, even with noise mitigation applied, percussive piling at the northernmost foundation location generates a PTS (permanent auditory injury) range of up to 1,500 m for low-frequency cetaceans and a TTS (temporary auditory injury) range of up to 49 km. These are the developer's own figures, after mitigation. Low-frequency cetaceans include minke, fin, sei and humpback whales - all species documented in these waters. A 49 km auditory injury zone, repeated across an April–October piling window for two consecutive years, cannot credibly be reconciled with a classification of effects as "not significant."

NMP Policy GEN 13: development should avoid significant adverse effects of man-made noise and vibration on species sensitive to such effects. The EIAR predicts disturbance to 9.186% of the Risso's dolphin management unit population and 27.7% of the coastal bottlenose dolphin population from piling noise, yet classifies these effects as "not significant." GEN 13 sets an avoidance standard, not a tolerance threshold.

The developer's own EPS and Basking Shark Risk Assessment (submitted to Marine Scotland, 22 February 2023) formally acknowledges risk of disturbance to minke whale, harbour porpoise, common dolphin, bottlenose dolphin, grey seal and basking shark from survey work alone. Full construction at this scale cannot credibly be claimed to present a lesser risk.

The 2023 Tolsta Stranding: In July 2023, 54 of 55 long-finned pilot whales died on Traigh Mhòr beach while geophysical surveys were being carried out at this lease area. The Scottish Government investigation could not rule out anthropogenic contribution and explicitly acknowledged limitations in the acoustic detection capability of the recorders used. This recent and devastating event must weigh heavily in this decision.

Priority Marine Features and seabed disturbance: Kelp beds - confirmed present across 10 km² within the Study Area and designated as a PMF and blue carbon habitat - are assessed as sustaining "minor adverse" impact, with no compensatory measures proposed. Maerl beds, horse mussel beds, fan mussel aggregations and cold-water coral reefs (all Scottish PMFs) are either excluded on the basis of decade-old desktop data (Tyler-Walters et al., 2016) or not mentioned at all. The developer concedes that its primary mitigation - micro-siting of turbines and cables - "cannot be quantified until detailed design and further site-specific investigations are complete."

NMP GEN 5: safeguard natural carbon sinks including kelp beds. NMP GEN 9: do not result in significant impact on the national status of Priority Marine Features, and protect and enhance the health of the marine area.

Cumulative and in-combination effects: The Habitats Regulations require assessment of cumulative effects with other plans and projects. The Scottish Government's own 2026 ICIA Screening Report concedes that Scottish offshore wind plans are "likely...to undergo

the derogations process under the Habitats Regulations." Spiorad na Mara is one of several large developments proposed in or adjacent to these waters; the cumulative assessment does not rigorously meet this requirement. NMP GEN 21 requires cumulative impacts affecting the ecosystem to be addressed.

Inadequate assessment and deferred mitigation: The joint representation from the Hebridean Whale and Dolphin Trust and Whale and Dolphin Conservation states that baseline cetacean data is "severely lacking." Proposed mitigation (MMOs, PAM, soft-start) is designed to address acute physical injury, not behavioural displacement; JNCC guidance confirms PAM has "limited range" for harbour porpoise and is "not suitable" for seals and baleen whales. Key mitigation is deferred to a post-consent Marine Mammal Mitigation Protocol, preventing Scottish Ministers from assessing adequacy at the point of determination - contrary to the beyond-reasonable-scientific-doubt standard required under the Habitats Regulations. Peer-reviewed monitoring at Scottish offshore wind farm construction sites (Benhemma-Le Gall et al. 2021, *Frontiers in Marine Science*) observed harbour porpoise displacement up to 12 km from pile-driving and 4 km from construction vessels alone - distances that no MMO, PAM or soft-start zone can address.

The EPS licence contradiction: The EIAR identifies that activities may require an EPS licence due to disturbance at a level requiring legal derogation, while simultaneously concluding residual effects are "negligible or minor." Under the Conservation of Habitats and Species Regulations 2017, an EPS licence can only be granted where no satisfactory alternative exists, imperative reasons of overriding public interest apply, and favourable conservation status is maintained. The EIAR demonstrates none of these. Basking sharks (IUCN Endangered) were recorded by the developer's own July 2023 aerial survey (EIAR Appendix 13.1). The EIAR does not adequately assess EMF impacts from subsea cables on elasmobranchs, despite Scottish Government ScotMER research identifying this as an unresolved evidence gap (FF.07).

No alternative solutions: Under the Habitats Regulations, consent cannot be granted if alternative solutions exist. Other ScotWind sites are available in waters without the same density of European Protected Species and designated habitats, and the existence of those alternatives is directly relevant to whether consent for this site can lawfully proceed. Consent would therefore breach or inadequately address the Conservation (Natural Habitats &c.) Regulations 1994, the Conservation of Habitats and Species Regulations 2017, the Marine (Scotland) Act 2010, Section 9 of the Wildlife and Countryside Act 1981, NMP Policies GEN 5, GEN 9, GEN 13 and GEN 21, and ASCOBANS Resolution 7.6 (2016) on underwater noise.

My further objection points:

I do not think this approach if fully investigated meets proposed climate change impact or is even a pure green option but mostly the impact it has on our beautiful island environment and marine life.

This planning decision is about the long-term future and the character of a landscape and community that cannot be replaced once altered at this scale. Spiorad na Mara Offshore Wind Farm would cause significant, cumulative and largely irreversible harm to landscape and seascape character, heritage setting, and the tourism economy.

I respectfully request that this application is rejected.

Yours sincerely,

To whom it may concern,

MD-00011742 & MD-00011743 - Spiorad na Mara Limited - Spiorad na Mara Offshore Wind Farm - Isle of Lewis

I formally object to the above application as it contravenes the following planning policies and guidance:

Lack of Community Engagement: There was no consultation with the communities of west Lewis before Crown Estate Scotland identified and leased the N4 area for development. The plan was imposed on them without consent.

Scotland's National Marine Plan (NMP) GEN 18 *'Early and effective engagement should be undertaken with the general public and all interested stakeholders to facilitate planning and consenting processes.'*

NMP Para. 4.77 *'Engagement with the public and other stakeholders should be appropriate, proportionate and meaningful. It should be undertaken as early as possible in planning and consenting processes,'*

NPF4 Spatial Principles - Just Transition. *'We will empower people to shape their places.'*

Lack of understanding of Cultural Significance: The EIAR makes no reference to the personal, cultural or historical attachment of the population of Lewis to their landscape and heritage, and fails to assess impacts on the living intangible heritage of the Gaelic community. Until a full assessment addressing impacts on Gaelic language and culture, community wellbeing, and west Lewis communities' relationship with their coastline is completed and publicly consulted upon, this application cannot lawfully be determined.

NMP Para. 4.20 *'The historic environment includes all aspects of the environment resulting from the interaction between people and places through time,'*

NPF4 Policy 7 a *'Development proposals with a potentially significant impact on historic assets or*

places will be accompanied by an assessment which is based on an understanding of the cultural significance of the historic asset and/or place.'

Significant Adverse Impacts on Protected Birdlife and Habitats: The development occupies primary foraging grounds for the Lewis Peatlands SPA red-throated divers, falls within the foraging range of the St Kilda gannet colony, and crosses a principal UK migratory corridor for protected species, including whooper swan and pink-footed goose. The EIAR fails to adequately assess the threats of collision, displacement, and barrier effects to these declining populations. Thus, consent would breach the **Conservation (Natural Habitats &c.) Regulations 1994**, the **2018 Offshore Regulations**, the **Marine (Scotland) Act 2010**, and the **Wildlife and Countryside Act 1981**, as the proposal is likely to adversely affect the integrity of the following SPA's: Lewis Peatlands, West Coast of the Outer Hebrides, Seas off St Kilda and St Kilda.

NPF4 Policy 7 i *'Development proposals affecting a World Heritage Site or its setting will only be supported where their Outstanding Universal Value is protected and preserved.'*

NPF4 Policy 11 e ix Impact on *'biodiversity including impacts on birds'* must be addressed.

Failure to Protect the Integrity and Setting of Scheduled Monuments: The EIAR anticipates significant adverse effects on coastal heritage. It fails to assess the impact on key scheduled monuments such as SM13786. The proposal would harm the Calanais monuments and wider historic landscape by introducing an industrial horizon into their natural surroundings, fundamentally undermining the meaning, experience, and interconnected setting of these sites, directly conflicting with **NPF4 Policy 7**. There are many alternative sites for offshore wind development and no reasons of over-riding public interest for choosing this site.

NMP Para. 4.22 *'Marine planning should help to ensure that future marine activities and developments can be carried out in a way that respects the marine historic environment and the setting of important coastal heritage assets.'* **Para. 4.23** *'Designated assets should be protected in situ within an appropriate setting'.*

NPF4 Policy 7 h *'Development proposals affecting scheduled monuments will only be supported where:'* **ii** *'significant adverse impacts on the integrity of the setting of a scheduled monument are avoided; or* **iii** *exceptional circumstances have been demonstrated to justify the impact on a scheduled monument and its setting and impacts on the monument or its setting have been minimised.'*

Unassessed Onshore Impacts and Breach of Statutory Rights of Crofters: Granting offshore consent while onshore impacts on irreplaceable machair and deep peatland remain unassessed, directly contravenes **NPF4 Policy 3**, which requires biodiversity (including irreplaceable habitats) to be left in a demonstrably better state. In addition the proposal fails to engage the statutory rights of crofters under the **Crofters (Scotland) Act 1993**.

NMP Para. 4.77 *'There should be a presumption in favour of publicising applications for marine and terrestrial components of a development together during consenting processes.'*

Irreparable Harm to the Tourism Economy and Coastal Character: The Spiorad na Mara wind farm would permanently industrialise the unspoiled coastal scenery and dark skies on the Isle of Lewis, destroying the very qualities that attract visitors to the island. Local residents have consistently warned during consultation that this visual impact would decimate the tourist industry on which so many islanders depend. Tourism is built on the area's landscape, seascape, heritage, nature, and dark skies. This development risks long-term damage to local businesses and the wider economy, contrary to **NPF4 Policy 30**.

NMP, Para. 12.28 *‘An unspoiled environment, high quality landscape and a sense of closeness to nature are important to many people. Scenery and environmental quality are key factors in attracting visitors to Scotland’s coasts,’*

Community Opposition and lack of Community Empowerment: The Community Opinion Survey on the Spiorad na Mara Offshore Wind Farm Development (N4) published by www.emg-lewis.co.uk in April 2026 found that 88% of residents from Ness to Uig opposed the N4 development. Approving this project against such overwhelming local consensus would directly contravene the National Islands Plan's commitment to community empowerment.

The National Islands Plan, page 65, para. 5 *‘Our vision is for islanders to be empowered to shape their own priorities, build their futures, and protect what makes their communities unique.’*

My further objection points:

This planning decision is about the long-term future and the character of a landscape and community that cannot be replaced once altered at this scale. Spiorad na Mara Offshore Wind Farm would cause significant, cumulative and largely irreversible harm to landscape and seascape character, heritage setting, and the tourism economy.

I respectfully request that this application is rejected.

Yours sincerely,

**Note I confirm that the views expressed in this email are my own and I intend for this typed name to act as my signature*

MD-00011742 & MD-00011743 - Spiorad na Mara Limited - Spiorad na Mara Offshore Wind Farm - Isle of Lewis

I formally object to the above application as it contravenes the following planning policies and guidance:

Lack of Community Engagement: There was no consultation with the communities of west Lewis before Crown Estate Scotland identified and leased the N4 area for development. The plan was imposed on them without consent. **Scotland's National Marine Plan (NMP) GEN 18** *'Early and effective engagement should be undertaken with the general public and all interested stakeholders to facilitate planning and consenting processes.'*

NMP Para. 4.77 *'Engagement with the public and other stakeholders should be appropriate, proportionate and meaningful. It should be undertaken as early as possible in planning and consenting processes,'*

NPF4 Spatial Principles - Just Transition. *'We will empower people to shape their places.'*

Lack of understanding of Cultural Significance: The EIAR makes no reference to the personal, cultural or historical attachment of the population of Lewis to their landscape and heritage, and fails to assess impacts on the living intangible heritage of the Gaelic community. Until a full assessment addressing impacts on Gaelic language and culture, community wellbeing, and west Lewis communities' relationship with their coastline is completed and publicly consulted upon, this application cannot lawfully be determined.

NMP Para. 4.20 *'The historic environment includes all aspects of the environment resulting from the interaction between people and places through time,'*

NPF4 Policy 7 a *'Development proposals with a potentially significant impact on historic assets or places will be accompanied by an assessment which is based on an understanding of the cultural significance of the historic asset and/or place.'*

Significant Adverse Impacts on Protected Birdlife and Habitats: The development occupies primary foraging grounds for the Lewis Peatlands SPA red-throated divers, falls within the foraging range of the St Kilda gannet colony, and crosses a principal UK migratory corridor for protected species, including whooper swan and pink-footed goose. The EIAR fails to adequately assess the threats of collision, displacement, and barrier effects to these declining populations. Thus, consent would breach the **Conservation (Natural Habitats &c.) Regulations 1994**, the **2018 Offshore Regulations**, the **Marine (Scotland) Act 2010**, and the **Wildlife and Countryside Act 1981**, as the proposal is likely to adversely affect the integrity of the following SPA's: Lewis Peatlands, West Coast of the Outer Hebrides, Seas off St Kilda and St Kilda.

NPF4 Policy 7 i *'Development proposals affecting a World Heritage Site or its setting will only be supported where their Outstanding Universal Value is protected and preserved.'*

NPF4 Policy 11 e ix Impact on *'biodiversity including impacts on birds'* must be addressed.

Failure to Protect the Integrity and Setting of Scheduled Monuments: The EIAR anticipates significant adverse effects on coastal heritage. It fails to assess the impact on key scheduled monuments such as SM13786. The proposal would harm the Calanais monuments and wider historic landscape by introducing an industrial horizon into their natural surroundings, fundamentally undermining the meaning, experience, and interconnected setting of these sites, directly conflicting with **NPF4 Policy 7**. There are many alternative sites for offshore wind development and no reasons of over-riding public interest for choosing this site.

NMP Para. 4.22 *'Marine planning should help to ensure that future marine activities and developments can be carried out in a way that respects the marine historic environment and the setting of important coastal heritage assets.'* **Para. 4.23** *'Designated assets should be protected in situ within an appropriate setting.'*

NPF4 Policy 7 h *'Development proposals affecting scheduled monuments will only be supported where:'* ii *'significant adverse impacts on the integrity of the setting of a scheduled monument are avoided; or* iii *exceptional circumstances have been demonstrated to justify the impact on a scheduled monument and its setting and impacts on the monument or its setting have been minimised.'*

Unassessed Onshore Impacts and Breach of Statutory Rights of Crofters: Granting offshore consent while onshore impacts on irreplaceable machair and deep peatland remain unassessed, directly contravenes **NPF4 Policy 3**, which

requires biodiversity (including irreplaceable habitats) to be left in a demonstrably better state. In addition the proposal fails to engage the statutory rights of crofters under the **Crofters (Scotland) Act 1993**.

NMP Para. 4.77 *'There should be a presumption in favour of publicising applications for marine and terrestrial components of a development together during consenting processes.'*

Irreparable Harm to the Tourism Economy and Coastal Character: The Spiorad na Mara wind farm would permanently industrialise the unspoiled coastal scenery and dark skies on the Isle of Lewis, destroying the very qualities that attract visitors to the island. Local residents have consistently warned during consultation that this visual impact would decimate the tourist industry on which so many islanders depend. Tourism is built on the area's landscape, seascape, heritage, nature, and dark skies. This development risks long-term damage to local businesses and the wider economy, contrary to **NPF4 Policy 30**.

NMP, Para. 12.28 *'An unspoiled environment, high quality landscape and a sense of closeness to nature are important to many people. Scenery and environmental quality are key factors in attracting visitors to Scotland's coasts,'*

Community Opposition and lack of Community Empowerment: The Community Opinion Survey on the Spiorad na Mara Offshore Wind Farm Development (N4) published by www.emg-lewis.co.uk in April 2026 found that 88% of residents from Ness to Uig opposed the N4 development. Approving this project against such overwhelming local consensus would directly contravene the National Islands Plan's commitment to community empowerment.

The National Islands Plan, page 65, para. 5 *'Our vision is for islanders to be empowered to shape their own priorities, build their futures, and protect what makes their communities unique.'*

My further objection points:

This planning decision is about the long-term future and the character of a landscape and community that cannot be replaced once altered at this scale. Spiorad na Mara Offshore Wind Farm would cause significant, cumulative and largely irreversible harm to landscape and seascape character, heritage setting, and the tourism economy.

I respectfully request that this application is rejected.

Spiorad na Mara Limited - Spiorad na Mara Offshore Wind Farm - Isle of Lewis

.
I formally object to the above application as it contravenes the following planning policies and guidance:

.
Lack of community engagement.

.
Lack of understanding of cultural significance
Significant adverse impacts on protected bird life and habitats.

.
Failure to protect the integrity and setting of scheduled monuments.
(Specifically the Calanais Stones, the most visited site in Lewis).

.
Unassessed onshore impacts and breach of statutory rights of crofters.

.
Irreparable harm to the tourism economy and coastal character.

.
Community opposition and lack of community empowerment.

...

This planning application is about the long-term future and the character of a landscape and community that cannot be replaced once altered on this scale. Spiorad na Mara Offshore Wind Farm would cause significant, cumulative and largely irreversible harm to landscape and seascape character, heritage setting, and the tourism economy.

I RESPECTFULLY REQUEST THAT THIS APPLICATION IS REJECTED.

MD-00011742 & MD-00011743 - Spiorad na Mara Limited - Spiorad na Mara Offshore Wind Farm - Isle of Lewis

I formally object to the above application as it contravenes the following planning policies and guidance:

Lack of Community Engagement: There was no consultation with the communities of west Lewis before Crown Estate Scotland identified and leased the N4 area for development. The plan was imposed on them without consent.

Scotland's National Marine Plan (NMP) GEN 18 *'Early and effective engagement should be undertaken with the general public and all interested stakeholders to facilitate planning and consenting processes.'*

NMP Para. 4.77 *'Engagement with the public and other stakeholders should be appropriate, proportionate and meaningful. It should be undertaken as early as possible in planning and consenting processes,'*

NPF4 Spatial Principles - Just Transition. *'We will empower people to shape their places.'*

Lack of understanding of Cultural Significance: The EIAR makes no reference to the personal, cultural or historical attachment of the population of Lewis to their landscape and heritage, and fails to assess impacts on the living intangible heritage of the Gaelic community. Until a full assessment addressing impacts on Gaelic language and culture, community wellbeing, and west Lewis communities' relationship with their coastline is completed and publicly consulted upon, this application cannot lawfully be determined.

NMP Para. 4.20 *'The historic environment includes all aspects of the environment resulting from the interaction between people and places through time,'*

NPF4 Policy 7 a *'Development proposals with a potentially significant impact on historic*

assets or places will be accompanied by an assessment which is based on an understanding of the cultural significance of the historic asset and/or place.'

Significant Adverse Impacts on Protected Birdlife and Habitats: The development occupies primary foraging grounds for the Lewis Peatlands SPA red-throated divers, falls within the foraging range of the St Kilda gannet colony, and crosses a principal UK migratory corridor for protected species, including whooper swan and pink-footed goose. The EIAR fails to adequately assess the threats of collision, displacement, and barrier effects to these declining populations. Thus, consent would breach the **Conservation (Natural Habitats &c.) Regulations 1994**, the **2018 Offshore Regulations**, the **Marine (Scotland) Act 2010**, and the **Wildlife and Countryside Act 1981**, as the proposal is likely to adversely affect the integrity of the following SPA's: Lewis Peatlands, West Coast of the Outer Hebrides, Seas off St Kilda and St Kilda.

NPF4 Policy 7 l *'Development proposals affecting a World Heritage Site or its setting will only be supported where their Outstanding Universal Value is protected and preserved.'*

NPF4 Policy 11 e ix Impact on *'biodiversity including impacts on birds'* must be addressed.

Failure to Protect the Integrity and Setting of Scheduled Monuments: The EIAR anticipates significant adverse effects on coastal heritage. It fails to assess the impact on key scheduled monuments such as SM13786. The proposal would harm the Calanais monuments and wider historic landscape by introducing an industrial horizon into their natural surroundings, fundamentally undermining the meaning, experience, and interconnected setting of these sites, directly conflicting with **NPF4 Policy 7**. There are many alternative sites for offshore wind development and no reasons of over-riding public interest for choosing this site.

NMP Para. 4.22 *'Marine planning should help to ensure that future marine activities and developments can be carried out in a way that respects the marine historic environment and the setting of important coastal heritage assets.'* **Para. 4.23** *'Designated assets should be protected in situ within an appropriate setting'.*

NPF4 Policy 7 h *'Development proposals affecting scheduled monuments will only be supported where:'* **ii** *'significant adverse impacts on the integrity of the setting of a scheduled monument are avoided; or* **iii** *exceptional circumstances have been demonstrated to justify the impact on a scheduled monument and its setting and impacts on the monument or its setting have been minimised.'*

Unassessed Onshore Impacts and Breach of Statutory Rights of Crofters: Granting offshore consent while onshore impacts on irreplaceable machair and deep peatland remain unassessed, directly contravenes **NPF4 Policy 3**, which requires biodiversity (including irreplaceable habitats) to be left in a demonstrably better state. In addition the

proposal fails to engage the statutory rights of crofters under the **Crofters (Scotland) Act 1993**.

NMP Para. 4.77 *'There should be a presumption in favour of publicising applications for marine and terrestrial components of a development together during consenting processes.'*

Irreparable Harm to the Tourism Economy and Coastal Character: The Spiorad na Mara wind farm would permanently industrialise the unspoiled coastal scenery and dark skies on the Isle of Lewis, destroying the very qualities that attract visitors to the island. Local residents have consistently warned during consultation that this visual impact would decimate the tourist industry on which so many islanders depend. Tourism is built on the area's landscape, seascape, heritage, nature, and dark skies. This development risks long-term damage to local businesses and the wider economy, contrary to **NPF4 Policy 30**.

NMP, Para. 12.28 *'An unspoiled environment, high quality landscape and a sense of closeness to nature are important to many people. Scenery and environmental quality are key factors in attracting visitors to Scotland's coasts,'*

Community Opposition and lack of Community Empowerment: The Community Opinion Survey on the Spiorad na Mara Offshore Wind Farm Development (N4) published by www.emg-lewis.co.uk in April 2026 found that 88% of residents from Ness to Uig opposed the N4 development. Approving this project against such overwhelming local consensus would directly contravene the National Islands Plan's commitment to community empowerment.

The National Islands Plan, page 65, para. 5 *'Our vision is for islanders to be empowered to shape their own priorities, build their futures, and protect what makes their communities unique.'*

My further objection points:

Being a resident Crofter on Bernera I am very disappointed that the consultation process was flawed and kept quiet.

I would much prefer local government to have devolved powers work on renewable energy projects enabling local people to decide what is suitable for our own land.

I am not a supporter of projects like this going ahead without local permissions and agreement. This feels very corrupt and undemocratic. Empower us with the capitol and we can create a much better future.

Our ancestors here on Bernera fought for their freedoms and rights in the courts. I trust we will continue to do so.

This planning decision is about the long-term future and the character of a landscape and

community that cannot be replaced once altered at this scale. Spiorad na Mara Offshore Wind Farm would cause significant, cumulative and largely irreversible harm to landscape and seascape character, heritage setting, and the tourism economy.

I respectfully request that this application is rejected.

Yours sincerely,

****Note** I confirm that the views expressed in this email are my own and I intend for this typed name to act as my signature*

Subject: Objection - Spiorad na Mara Offshore Wind Farm (MD-00011742 & MD-00011743)
Date: 03 May 2026 10:04:16

I formally object to the above application as it contravenes the following planning policies and guidance:

Lack of Community Engagement: There was no consultation with the communities of west Lewis before Crown Estate Scotland identified and leased the N4 area for development.

The plan was imposed on them without consent.

Scotland's National Marine Plan (NMP) GEN 18 'Early and effective engagement should be undertaken with the general public and all interested stakeholders to facilitate planning and consenting processes.'

NMP Para. 4.77 'Engagement with the public and other stakeholders should be appropriate, proportionate and meaningful. It should be undertaken as early as possible in planning and consenting processes,'

NPF4 Spatial Principles - Just Transition. 'We will empower people to shape their places.'

Lack of understanding of Cultural Significance: The EIAR makes no reference to the personal, cultural or historical attachment of the population of Lewis to their landscape and heritage, and fails to assess impacts on the living intangible heritage of the Gaelic community. Until a full assessment addressing impacts on Gaelic language and culture, community wellbeing, and west Lewis communities' relationship with their coastline is completed and publicly consulted upon, this application cannot lawfully be determined.

NMP Para. 4.20 'The historic environment includes all aspects of the environment resulting from the interaction between people and places through time,'

NPF4 Policy 7 a 'Development proposals with a potentially significant impact on historic assets or places will be accompanied by an assessment which is based on an understanding of the cultural significance of the historic asset and/or place.'

Significant Adverse Impacts on Protected Birdlife and Habitats: The development occupies primary foraging grounds for the Lewis Peatlands SPA red-throated divers, falls within the foraging range of the St Kilda gannet colony, and crosses a principal UK migratory corridor for protected species, including whooper swan and pink-footed goose. The EIAR fails to adequately assess the threats of collision, displacement, and barrier effects to these declining populations. Thus, consent would breach the Conservation (Natural Habitats &c.) Regulations 1994, the 2018 Offshore Regulations, the Marine (Scotland) Act 2010, and the Wildlife and Countryside Act 1981, as the proposal is likely to adversely affect the integrity of the following SPA's: Lewis Peatlands, West Coast of the Outer Hebrides, Seas off St Kilda and St Kilda.

NPF4 Policy 7 1 'Development proposals affecting a World Heritage Site or its setting will only be supported where their Outstanding Universal Value is protected and preserved.'

NPF4 Policy 11 e ix Impact on 'biodiversity including impacts on birds' must be addressed.

Failure to Protect the Integrity and Setting of Scheduled Monuments: The EIAR anticipates significant adverse effects on coastal heritage. It fails to assess the impact on key scheduled monuments such as SM13786. The proposal would harm the Calanais monuments and wider historic landscape by introducing an industrial horizon into their natural surroundings, fundamentally undermining the meaning, experience, and interconnected setting of these sites, directly conflicting with NPF4 Policy 7. There are many alternative sites for offshore wind development and no reasons of over-riding public

interest for choosing this site.

NMP Para. 4.22 'Marine planning should help to ensure that future marine activities and developments can be carried out in a way that respects the marine historic environment and the setting of important coastal heritage assets.' Para. 4.23 'Designated assets should be protected in situ within an appropriate setting'.

NPF4 Policy 7 h 'Development proposals affecting scheduled monuments will only be supported where:' ii 'significant adverse impacts on the integrity of the setting of a scheduled monument are avoided; or iii exceptional circumstances have been demonstrated to justify the impact on a scheduled monument and its setting and impacts on the monument or its setting have been minimised.'

Unassessed Onshore Impacts and Breach of Statutory Rights of Crofters: Granting offshore consent while onshore impacts on irreplaceable machair and deep peatland remain unassessed, directly contravenes NPF4 Policy 3, which requires biodiversity (including irreplaceable habitats) to be left in a demonstrably better state. In addition the proposal fails to engage the statutory rights of crofters under the Crofters (Scotland) Act 1993.

NMP Para. 4.77 'There should be a presumption in favour of publicising applications for marine and terrestrial components of a development together during consenting processes.'

Irreparable Harm to the Tourism Economy and Coastal Character: The Spiorad na Mara wind farm would permanently industrialise the unspoiled coastal scenery and dark skies on the Isle of Lewis, destroying the very qualities that attract visitors to the island. Local residents have consistently warned during consultation that this visual impact would decimate the tourist industry on which so many islanders depend. Tourism is built on the area's landscape, seascape, heritage, nature, and dark skies. This development risks long-term damage to local businesses and the wider economy, contrary to NPF4 Policy 30.

NMP, Para. 12.28 'An unspoiled environment, high quality landscape and a sense of closeness to nature are important to many people. Scenery and environmental quality are key factors in attracting visitors to Scotland's coasts,'

Community Opposition and lack of Community Empowerment: The Community Opinion Survey on the Spiorad na Mara Offshore Wind Farm Development (N4) published by www.emg-lewis.co.uk in April 2026 found that 88% of residents from Ness to Uig opposed the N4 development. Approving this project against such overwhelming local consensus would directly contravene the National Islands Plan's commitment to community empowerment.

The National Islands Plan, page 65, para. 5 'Our vision is for islanders to be empowered to shape their own priorities, build their futures, and protect what makes their communities unique.'

Significant Adverse Impacts on Marine Mammals and Protected Marine Habitats: The Outer Hebrides are described by the Scottish Government's own scientists as "probably the richest area of the UK for marine mammals with around 20 species of cetacean recorded in the region over the last 30 years" (Scottish Marine and Freshwater Science Vol. 5 No. 9). The site lies adjacent to the Inner Hebrides and Minches SAC - the largest harbour porpoise SAC in Europe - within the wider range of the North-east Lewis MPA for Risso's dolphin, within documented fin and sperm whale migration corridors (Blue Corridors initiative), and within the wider feeding and habitat range of minke, humpback and sei whales, and within the foraging range of the Monach Isles grey seal colony (the largest in Europe). The EIAR fails to reflect this internationally significant baseline in its significance conclusions and cannot demonstrate, to the legal standard required, that adverse effects on these protected sites and species will be avoided. Under the Habitats Regulations Appraisal process, consent must be refused unless Scottish Ministers are satisfied beyond reasonable scientific doubt that the integrity of European sites will not be adversely affected (NatureScot HRA guidance). That standard has not been met.

Construction noise: The developer's own noise modelling (EIAR Appendix 19.2) provides for up to 5.5 hours of percussive piling per day, up to 10,635 strikes per pile per day, hammer energies up to 5,000 kJ, and 1,563 pin piles across two consecutive construction years (April–October). The EIAR itself acknowledges that "harbour porpoises are widely regarded as the most sensitive marine mammal receptor to underwater noise" and that behavioural disturbance can occur up to 70 km from piling (Bailey et al., 2010, cited in Chapter 13). The proposed piling window coincides with peak cetacean seasonal density and with harbour seal pupping (June–July), triggering the prohibition on deliberate disturbance of European Protected Species during breeding and rearing periods under the Conservation of Habitats and Species Regulations 2017 and Section 9 of the Wildlife and Countryside Act 1981.

The developer's own underwater noise modelling (EIAR Appendix 13.3) confirms that, even with noise mitigation applied, percussive piling at the northernmost foundation location generates a PTS (permanent auditory injury) range of up to 1,500 m for low-frequency cetaceans and a TTS (temporary auditory injury) range of up to 49 km. These are the developer's own figures, after mitigation. Low-frequency cetaceans include minke, fin, sei and humpback whales - all species documented in these waters. A 49 km auditory injury zone, repeated across an April–October piling window for two consecutive years, cannot credibly be reconciled with a classification of effects as "not significant."

NMP Policy GEN 13: development should avoid significant adverse effects of man-made noise and vibration on species sensitive to such effects. The EIAR predicts disturbance to 9.186% of the Risso's dolphin management unit population and 27.7% of the coastal bottlenose dolphin population from piling noise, yet classifies these effects as "not significant." GEN 13 sets an avoidance standard, not a tolerance threshold.

The developer's own EPS and Basking Shark Risk Assessment (submitted to Marine Scotland, 22 February 2023) formally acknowledges risk of disturbance to minke whale, harbour porpoise, common dolphin, bottlenose dolphin, grey seal and basking shark from survey work alone. Full construction at this scale cannot credibly be claimed to present a lesser risk.

The 2023 Tolsta Stranding: In July 2023, 54 of 55 long-finned pilot whales died on Traigh Mhòr beach while geophysical surveys were being carried out at this lease area. The Scottish Government investigation could not rule out anthropogenic contribution and explicitly acknowledged limitations in the acoustic detection capability of the recorders used. This recent and devastating event must weigh heavily in this decision.

Priority Marine Features and seabed disturbance: Kelp beds - confirmed present across 10 km² within the Study Area and designated as a PMF and blue carbon habitat - are assessed as sustaining "minor adverse" impact, with no compensatory measures proposed. Maerl beds, horse mussel beds, fan mussel aggregations and cold-water coral reefs (all Scottish PMFs) are either excluded on the basis of decade-old desktop data (Tyler-Walters et al., 2016) or not mentioned at all. The developer concedes that its primary mitigation - micro-siting of turbines and cables - "cannot be quantified until detailed design and further site-specific investigations are complete."

NMP GEN 5: safeguard natural carbon sinks including kelp beds. NMP GEN 9: do not result in significant impact on the national status of Priority Marine Features, and protect and enhance the health of the marine area.

Cumulative and in-combination effects: The Habitats Regulations require assessment of cumulative effects with other plans and projects. The Scottish Government's own 2026 ICIA Screening Report concedes that Scottish offshore wind plans are "likely...to undergo

the derogations process under the Habitats Regulations." Spiorad na Mara is one of several large developments proposed in or adjacent to these waters; the cumulative assessment does not rigorously meet this requirement. NMP GEN 21 requires cumulative impacts affecting the ecosystem to be addressed.

Inadequate assessment and deferred mitigation: The joint representation from the Hebridean Whale and Dolphin Trust and Whale and Dolphin Conservation states that baseline cetacean data is "severely lacking." Proposed mitigation (MMOs, PAM, soft-start) is designed to address acute physical injury, not behavioural displacement; JNCC guidance confirms PAM has "limited range" for harbour porpoise and is "not suitable" for seals and baleen whales. Key mitigation is deferred to a post-consent Marine Mammal Mitigation Protocol, preventing Scottish Ministers from assessing adequacy at the point of determination - contrary to the beyond-reasonable-scientific-doubt standard required under the Habitats Regulations. Peer-reviewed monitoring at Scottish offshore wind farm construction sites (Benhemma-Le Gall et al. 2021, *Frontiers in Marine Science*) observed harbour porpoise displacement up to 12 km from pile-driving and 4 km from construction vessels alone - distances that no MMO, PAM or soft-start zone can address.

The EPS licence contradiction: The EIAR identifies that activities may require an EPS licence due to disturbance at a level requiring legal derogation, while simultaneously concluding residual effects are "negligible or minor." Under the Conservation of Habitats and Species Regulations 2017, an EPS licence can only be granted where no satisfactory alternative exists, imperative reasons of overriding public interest apply, and favourable conservation status is maintained. The EIAR demonstrates none of these. Basking sharks (IUCN Endangered) were recorded by the developer's own July 2023 aerial survey (EIAR Appendix 13.1). The EIAR does not adequately assess EMF impacts from subsea cables on elasmobranchs, despite Scottish Government ScotMER research identifying this as an unresolved evidence gap (FF.07).

No alternative solutions: Under the Habitats Regulations, consent cannot be granted if alternative solutions exist. Other ScotWind sites are available in waters without the same density of European Protected Species and designated habitats, and the existence of those alternatives is directly relevant to whether consent for this site can lawfully proceed. Consent would therefore breach or inadequately address the Conservation (Natural Habitats &c.) Regulations 1994, the Conservation of Habitats and Species Regulations 2017, the Marine (Scotland) Act 2010, Section 9 of the Wildlife and Countryside Act 1981, NMP Policies GEN 5, GEN 9, GEN 13 and GEN 21, and ASCOBANS Resolution 7.6 (2016) on underwater noise.

My further objection points:
Birdlife en the view

This planning decision is about the long-term future and the character of a landscape and community that cannot be replaced once altered at this scale. Spiorad na Mara Offshore Wind Farm would cause significant, cumulative and largely irreversible harm to landscape and seascape character, heritage setting, and the tourism economy.
I respectfully request that this application is rejected.

Yours sincerely,

A black rectangular redaction box covering the signature of the sender.

Unassessed Onshore Impacts and Breach of Statutory Rights of Crofters: Granting offshore consent while onshore impacts on irreplaceable machair and deep peatland remain unassessed, directly contravenes **NPF4 Policy 3**, which requires biodiversity (including irreplaceable habitats) to be left in a demonstrably better state. In addition the proposal fails to engage the statutory rights of crofters under the **Crofters (Scotland) Act 1993**.
NMP Para. 4.77 *'There should be a presumption in favour of publicising applications for marine and terrestrial components of a development together during consenting processes.'*

Irreparable Harm to the Tourism Economy and Coastal Character: The Spiorad na Mara wind farm would permanently industrialise the unspoiled coastal scenery and dark skies on the Isle of Lewis, destroying the very qualities that attract visitors to the island. Local residents have consistently warned during consultation that this visual impact would decimate the tourist industry on which so many islanders depend. Tourism is built on the area's landscape, seascape, heritage, nature, and dark skies. This development risks long-term damage to local businesses and the wider economy, contrary to **NPF4 Policy 30**.

NMP, Para. 12.28 *'An unspoiled environment, high quality landscape and a sense of closeness to nature are important to many people. Scenery and environmental quality are key factors in attracting visitors to Scotland's coasts,'*

Community Opposition and lack of Community Empowerment: The Community Opinion Survey on the Spiorad na Mara Offshore Wind Farm Development (N4) published by www.emg-lewis.co.uk in April 2026 found that 88% of residents from Ness to Uig opposed the N4 development. Approving this project against such overwhelming local consensus would directly contravene the National Islands Plan's commitment to community empowerment.
The National Islands Plan, page 65, para. 5 *'Our vision is for islanders to be empowered to shape their own priorities, build their futures, and protect what makes their communities unique.'*

My further objection points:

This planning decision is about the long-term future and the character of a landscape and community that cannot be replaced once altered at this scale. Spiorad na Mara Offshore Wind Farm would cause significant, cumulative and largely irreversible harm to landscape and seascape character, heritage setting, and the tourism economy. I respectfully request that this application is rejected.

MD-00011742 & MD-00011743 - Spiorad na Mara Limited - Spiorad na Mara Offshore Wind Farm - Isle of Lewis

I formally object to the above application as it contravenes the following planning policies and guidance:

Lack of Community Engagement: There was no consultation with the communities of west Lewis before Crown Estate Scotland identified and leased the N4 area for development. The plan was imposed on them without consent. **Scotland's National Marine Plan (NMP) GEN 18** 'Early and effective engagement should be undertaken with the general public and all interested stakeholders to facilitate planning and consenting processes.'
NMP Para. 4.77 'Engagement with the public and other stakeholders should be appropriate, proportionate and meaningful. It should be undertaken as early as possible in planning and consenting processes.'
NPF4 Spatial Principles - Just Transition. 'We will empower people to shape their places.'

Lack of understanding of Cultural Significance: The EIAR makes no reference to the personal, cultural or historical attachment of the population of Lewis to their landscape and heritage, and fails to assess impacts on the living intangible heritage of the Gaelic community. Until a full assessment addressing impacts on Gaelic language and culture, community wellbeing, and west Lewis communities' relationship with their coastline is completed and publicly consulted upon, this application cannot lawfully be determined.

NMP Para. 4.20 'The historic environment includes all aspects of the environment resulting from the interaction between people and places through time,'

NPF4 Policy 7 a 'Development proposals with a potentially significant impact on historic assets or places will be accompanied by an assessment which is based on an understanding of the cultural significance of the historic asset and/or place.'

Significant Adverse Impacts on Protected Birdlife and Habitats: The development occupies primary foraging grounds for the Lewis Peatlands SPA red-throated divers, falls within the foraging range of the St Kilda gannet colony, and crosses a principal UK migratory corridor for protected species, including whooper swan and pink-footed goose. The EIAR fails to adequately assess the threats of collision, displacement, and barrier effects to these declining populations. Thus, consent would breach the **Conservation (Natural Habitats &c.) Regulations 1994**, the **2018 Offshore Regulations**, the **Marine (Scotland) Act 2010**, and the **Wildlife and Countryside Act 1981**, as the proposal is likely to adversely affect the integrity of the following SPA's: Lewis Peatlands, West Coast of the Outer Hebrides, Seas off St Kilda and St Kilda.

NPF4 Policy 7 i 'Development proposals affecting a World Heritage Site or its setting will only be supported where their Outstanding Universal Value is protected and preserved.'

NPF4 Policy 11 e ix Impact on 'biodiversity including impacts on birds' must be addressed.

Failure to Protect the Integrity and Setting of Scheduled Monuments: The EIAR anticipates significant adverse effects on coastal heritage. It fails to assess the impact on key scheduled monuments such as SM13786. The proposal would harm the Calanais monuments and wider historic landscape by introducing an industrial horizon into their natural surroundings, fundamentally undermining the meaning, experience, and interconnected setting of these sites, directly conflicting with **NPF4 Policy 7**. There are many alternative sites for offshore wind development and no reasons of over-riding public interest for choosing this site.

NMP Para. 4.22 'Marine planning should help to ensure that future marine activities and developments can be carried out in a way that respects the marine historic environment and the setting of important coastal heritage assets.' **Para. 4.23** 'Designated assets should be protected in situ within an appropriate setting'.

NPF4 Policy 7 h 'Development proposals affecting scheduled monuments will only be supported where: ii 'significant adverse impacts on the integrity of the setting of a scheduled monument are avoided; or iii exceptional circumstances have been demonstrated to justify the impact on a scheduled monument and its setting and impacts on the monument or its setting have been minimised.'

Reference to the planned application for buliding wind turbines on the sea North of the Butt of Lewis and the extremely detrimental effects on the population, Flora and Fauna this would occasion !.

I strongly object to possible tactics in order to further this "erroneous" plan.

Yours sincerely,
