Subject: RE: 00009969 - Moray Offshore Windfarm (West) Limited - Temporary Weather and Metocean Buoy - Sandend Bay, Aberdeenshire - Request for cost of works and timeframe for buoy specification

Hi Lizzie,

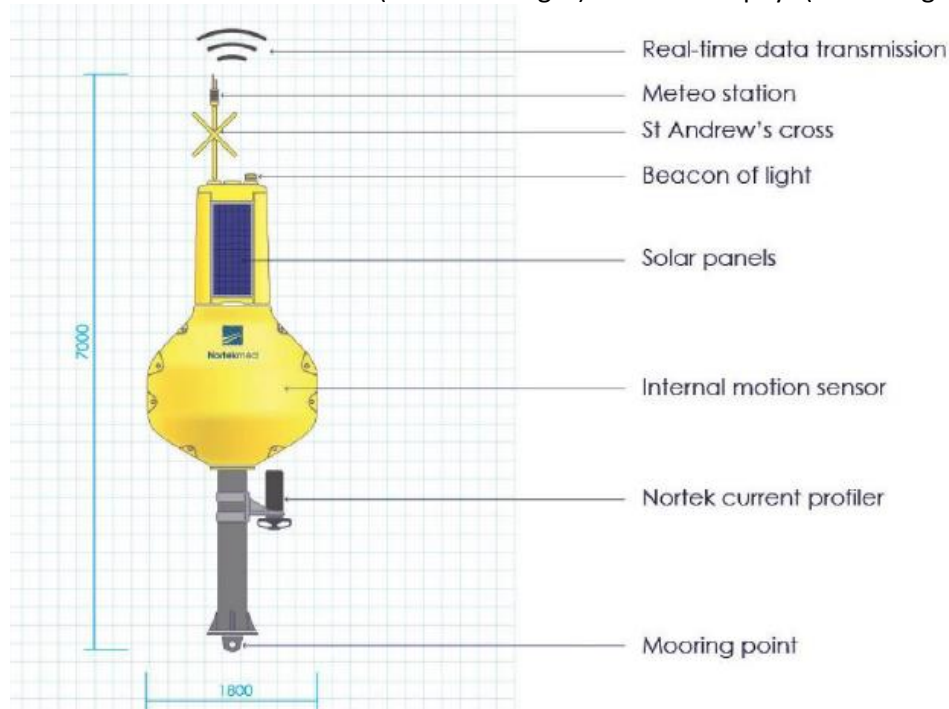

Apologies for the delay, our contractor had a lot of staff on annual leave so were delayed in responding.

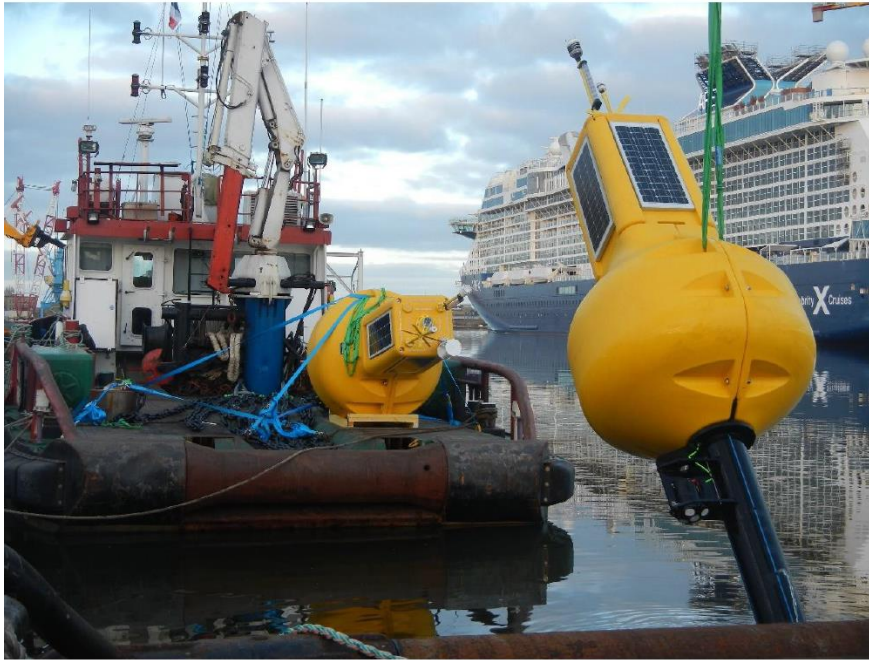

Cost of the works are estimated at [REDACTED] (meaning the cost of the works seaward of MHWS directly associated with the activity to which this licence application relates, i.e. the installation and removal of the weather buoy).

Regarding the buoy specifications, we have an indicative buoy make and model but we cannot currently confirm the exact buoy details because the procurement process to select the buoy provider and installation subcontractor is not yet complete. The indicative buoy specs available should be sufficient for the licence consultation process because the details we gave in the application cover letter for the clump weight dimensions and weight are a reasonable worst case scenario assumption. Below I've provided some drawings and photos of the indicative buoy with dimensions. Whilst if possible we would want to avoid having a condition on a licence requiring us to use a specific buoy make and model, we are happy for the indicative buoy specifications to be used for consultation purposes on the understanding that they are only indicative. We acknowledge that exact details will be required for example to apply for a Statutory Sanction from the Northern Lighthouse Board at a later date.

Indicative buoy specifications

Make and model: Nortek Alize (first two images) or Nortek Zephyr (third image)

Thanks, Chris
