

Regional assessments

21
Assessments

What is covered

The regional assessments present findings and information from SMA2020's assessments and case studies relevant to the 11 statutory SMRs and/or the 10 OMRs where possible.

The regional assessments do not introduce new material, rather highlight relevant parts of the wide-ranging assessment under the headings:

1. Physical characteristics.
2. Human activities, past and present, that details what has happened in the region over the period 2014 to 2018.
3. Pressures from human activities, based on the Pressures from activities workshop.
4. Assessments, highlighting key findings from Clean and safe, and Healthy and biologically diverse Topics as well as identifying the Priority Marine Features in the region and their contribution towards the Marine Protected Area network.
5. Impacts of climate change on the region.

All regional assessments include a satellite image to show the location of the SMR/OMR. This one for the Clyde SMR identifies the adjacent SMRs: Argyll; and Solway.
